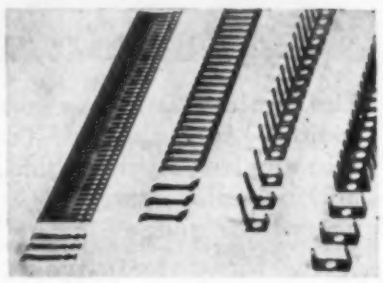
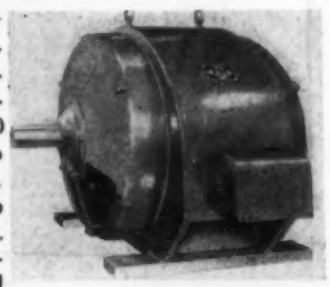
CONTINUOUS STRIP SPRINGS



Significant savings in assembly and handling time as well as low production cost are features of springs and small stampings produced by continuous strip method. Individual small springs are fabricated of beryllium copper in continuous, easy to handle lengths, with sections between parts partially sheared through. Attachment between parts is strong enough to keep lengths intact during inspection, plating, handling and shipment. Pieces can be snapped off easily for assembly. Lengths can be inserted in dispenser at work benches for speed in use. Illustrated springs were produced for refrigerator control, automobile heater and electric clock motor. Made by **Instrument Specialties Co., Little Falls, N. J.**

▲ Mention Item NED-675 when writing ▲

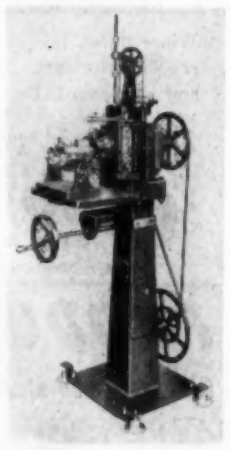
INDUCTION MOTOR



Available for heavy duty applications, squirrel cage induction motors can be furnished for power drives requiring from 100 to 1000 horsepower at speeds up to 1800 revolutions per minute. They are designed for drip and splashproof operation. Fabricated steel frame excludes falling particles and makes operation quiet. Sealed bearings can be cleaned and refilled without motor disassembly. Double end ventilation is provided by blower on each end of rotor. Starting characteristics are NEMA class B for across-the-line starting. Made by **Electric Machinery Mfg. Co.**, 821 Second Ave., S. E., Minneapolis 13, Minn.

▲ Mention Item NED-676 when writing ▲

ENGINE TURNING MACHINE

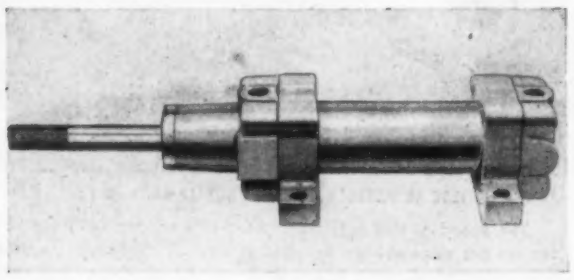


Two models of this 6-inch straight lining engine turning machine are available. One is equipped with rosette attachment and slide rest and second model has rosette attachment, sun ray attachment and slide rest. Both machines feature ball bearing mounted rotating parts, freedom of slide movement and adjustment for length of stroke. Single or compound drive is used from handwheel to slide traverse. Vibration is held to minimum. Removable plate in base facilitates changing of counter-weights. Made by **Lawrence H. Cook, Inc.**, 65 Massasoit Ave., East Providence, R. I.

▲ Mention Item NED-677 when writing ▲

HYDRAULIC CYLINDER

Seven standard mountings make this Natdraulic cylinder ad ptable to most initial equipment needs. Cylinders are available in bore sizes ranging from 1 to 12 inches. Stroke



can be any length and units will operate on pressures of up to 1500 pounds per square inch with a 5 to 1 safety factor. Additional features of cylinders are long bronze side thrust bearings, alloy steel rods and seamless tubing bored and honed to mirror finish. All tolerances and concentricity are held within given limits. Cylinders can be designed and engineered for special tooling. Made by **National Hydraulic Co.**, 4505 Oakwood Blvd., Melvindale, Mich.

▲ Mention Item NED-678 when writing ▲

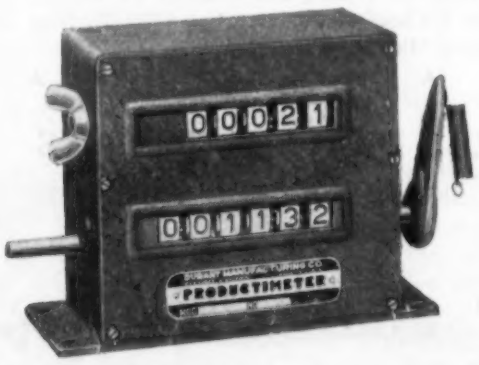
HEAVY DUTY SKID PLATFORM

Designed to withstand severe usage in handling heavy castings, scrap and other types of industrial products, this Phil-Skid heavy duty skid platform can be furnished in any desired size for use with various types of lift trucks. Platforms are of all welded steel construction and have heavy corrugated steel deck. No bolts or screws are employed so that load will not be scored or torn. Three-inch channel legs made of 3/16-inch steel plate eliminate possibility of load tipping. Made by **Phillips Mine & Mill Supply Co.**, 2219 Jane St., Pittsburgh 3, Pa.

▲ Mention Item NED-679 when writing ▲

ROTARY & STROKE COUNTER

Available in both conventional and predetermined types, series N double deck rotary and stroke counters provide for registering current runs and daily, weekly or monthly pro-



duction totals. Rotary models have double worm drive for smooth action and high speed. Stroke models are designed so that upper row is chain driven. Predetermined models have switch mechanism that gives positive action at predetermined count. Both front and back covers of instrument case are aluminum. Louvers are designed for easy reading. Made by **Durant Mfg. Co.**, 1922 N. Buffum St., Milwaukee 1, Wis.

▲ Mention Item NED-680 when writing ▲

Do You Know

■ DESIGNED to illustrate all principles involved in modern radio receiver construction, kits are similar to type used extensively in Army and Navy radio and electronic training courses. Available for educational purposes, these radio kits contain all necessary parts, diagrams and instructions to build a complete five-tube superheterodyne receiver. Made by General Electric Co., education section, Electronics Dept., Wolf St. Plant, Syracuse, N. Y.

▲ Mention Item NED-681 when writing ▲

Commonly used as cushioning for upholstered furniture, Airfoam latex is now being employed as carpet padding. Material, 3/8-inch thick, is placed directly between carpet and floor and is claimed to result in unusual underfoot comfort, prevent carpet from creeping even on marble floors and add to life of floor covering. Airfoam made by Goodyear Tire & Rubber Co., 1144 E. Market St., Akron 16, O.

▲ Mention Item NED-682 when writing ▲

Television has made its debut to industry in form of sight transmitting system known as the Utiliscope. Equipment reproduces on screen, similar to that of home television receiver, an exact picture of something currently taking place at remote or inaccessible point. At Hell Gate power station of Consolidated Edison Co., it shows water level in boiler remotely located from main control room. Many other industrial uses are planned. This equipment was developed in collaboration with Diamond Specialty Corp. by Farnsworth Television & Radio Corp., Ft. Wayne, Ind.

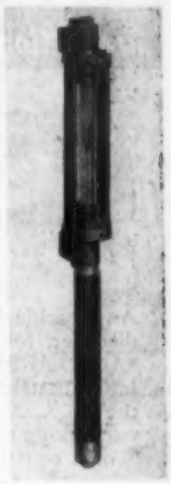
RECORDING FLOW METER



Utilizing Foxboro Co. Dynalog system of transmission by electronic high frequency circuits, this recording rotameter offers instantaneous response to change of flow, continuous balance and elimination of overtravel. Flow of any liquids or gases in any pipe line can be recorded. Recording is based on induction bridge system.

Unit construction utilizes four principal assemblies. Direct linkage is effected without gears. Transmitter assembly is available for recording rotor position of many standard SK rotameter designs, including SK universal recording rotameters (*Item NED-2526 May '44*) and Armored rotameters. Made by **Schutte & Koerting Co.**, Twelfth & Thompson Sts., Philadelphia 22, Pa.

INDUSTRIAL SHOP TRUCK

Added to line of industrial shop trucks, model TR Chore Boy tractor has drawbar pull of 1050 pounds and weighs approximately 1300 pounds. It is designed for low-cost towing

and pick-up work in industrial plants, warehouses and railroad freight stations and for loading trucks. Overall length is 63¾ inches and width is 37½ inches. Driver sits in comfortable seat and has clear view of all handling operations. Truck is equipped with two brakes, one a foot brake and other an automatic brake that is applied when driver leaves seat. Transmission is automotive type with three speeds forward and one reverse. Clutch is patented cone type. Power is furnished by 4-cycle, air cooled gasoline engine with magneto ignition. It is located under driver's seat. Truck is of all welded steel construction and can be supplied with any type standard hitch. Made by Buda Co., 15440 Commercial Ave., Harvey, Ill.

with PLASTIC ROCK!

Trowel a smooth, tough, malleable surfacing right over your old concrete or wood floor.

Plastic Rock comes complete, packed in barrels; nothing more to buy; no application "formula" to confuse you. Simply mix and trowel right over old floor; sticks to concrete, wood, steel; average depth ½"; patches concrete to perfect feather edge. Old floor Saturday, new floor Monday; hundreds of tons rolling on steel wheels only improve it; 7-year-old floors show no wear. Plastic Rock is spark-proof, skid-safe even when wet, dustless, silent; feels like cork under foot; cannot splinter, crack, crumble, curl or loosen. Used by largest Industries and railroads in America. Your contractor or your own crew can apply.

ASCO "AUTO-ARB" can triple production on many secondary operations

Automatically Expanding Arbor for holding work piece by inside diameter while machining outside surface.

PERMITS CHUCKING and UNCHUCKING *WITHOUT STOPPING SPINDLE!*

Any machinable part can be held firmly by the inside diameter, for secondary operations, with the ASCO "AUTO-ARB". "AUTO-ARB" is a precision tool, expanding accurately, and maintaining perfect concentricity with the collet. No other tools are necessary—chucking and unchucking can be done without stopping the machine. Works equally well in "blind" holes, and requires a minimum of holding surface—eliminating the need for special arbors. Can also be used on drill presses or milling machines with collet devices.

Auto-Arb is available in range of standard sizes, from ⅜" to 1½", at 1/64" intervals. Only 5 collet sizes are required to accommodate this range. Larger sizes available on special order.

Auto-Arb has been proved by production tests—more than tripling production and eliminating downtime of machines. No failures have been reported from the hundreds already in actual service.

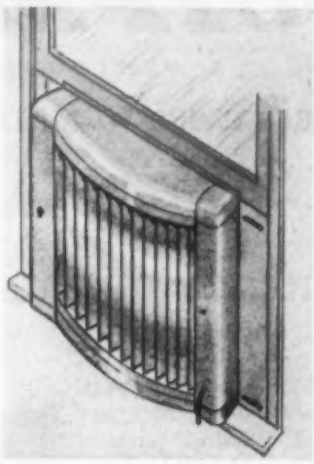
WINDOW TYPE COOLER



Equipped with metal fillins, this window type evaporative cooler is adjustable in width from 24 to 34½ inches to fit almost any window width. Adjustable directional louvers, motor and water flow control switches are placed on front panel to provide complete control of operation from within room. Design is claimed to eliminate installation problems.

Cabinet is made of 22-gage rust resistant steel. Recessed fan orifice prevents air loss or recirculation. Sno-Fluf cooling pad, which is water moistened, is made of odorless aspen. Fan is 16 inches in diameter and is powered by 1/25-horsepower electric motor. Motor requires lubrication only once a season. Made by **Palmer Mfg. Corp.**, 705 W. Jefferson St., Phoenix, Ariz.

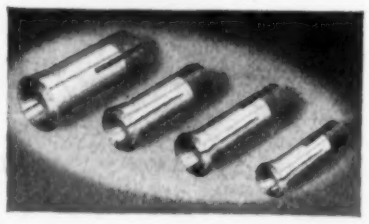
▲ Mention Item NED-689 when writing ▲

PLATING RACK COATING

Tough flexible Pen-Kote 590 is highly resistant to all plating and cleaning solutions including chlorinated degreasing solvents. Material consists of aqueous dispersion of Saran plastic and contains no organic solvents. It can be applied to plating racks by hand dipping and will dry in less than 1 hour at room temperature, giving complete protection in 24 hours. Because material is an aqueous dispersion rather than solution, it is free flowing and will drain rapidly so as not to form webs or strands to be trimmed off after dipping. Sample racks will be given free trial coating and returned for testing. Made by **Peninsular Chemical Products Co.**, 6795 E. Nine Mile Rd., Van Dyke, Mich.

▲ Mention Item NED-690 when writing ▲

BRASS DRAW-IN COLLETS



Adaptable for use on short run production jobs and for odd sizes that are used only occasionally, these precision draw-in collets are made of brass. Units were designed for use with South Bend lathes but are available in four styles and can be purchased for use with any machine which they will fit. Brass collets are furnished in standard fractional sizes from 1/16-inch capacity in increments of 1/64-inch up to maximum capacity of collet. They are available also with decimal hole sizes for any diameter between 0.0625-inch and maximum capacity of collet.

Brass collets are not intended to replace more expensive hardened steel units. They are manufactured to same tolerances however, and low cost makes them practical for short run production and occasional jobs. Collets can be machined for holding tapers or irregular shapes. Made by **South Bend Lathe Works**, 307 E. Madison St., South Bend 22, Ind.

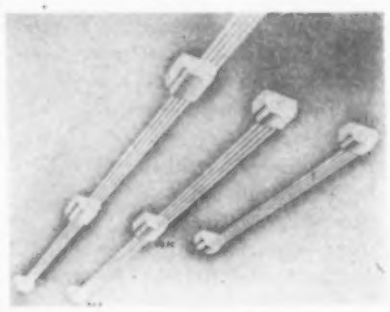
FLUORESCENT LAMPS



Instant starting and 10,000-hour rated lamp life are features of Slim fluorescent lamps. These hot cathode lamps are said to have 20 per cent increased light efficiency over cold cathode units. They are available in standard 8-foot lengths and when used with Duro Test ballast they are rated at 35 watts.

Units are equipped with push type single contact bases which are easily inserted in safety spring tension sockets. Lamps are available in all standard colors and will operate singly or in multiple. No starters are required. Made by **Duro Test Corp.**, Dept. 15, North Bergen, N. J.

▲ Mention Item NED-699 when writing ▲

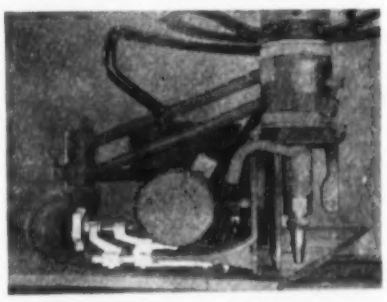
POSITIVE DRIVE TOOL HOLDER

Holes measuring 15/16-inch from center to center can be tapped on multiple spindle machines with this Neoprene mounted Tool-Flex tool holder. Unit has Acme threaded shanks for use in multiple spindle tapping operations. Shank, collet, oil resistant Neoprene mounting and locking ring comprise tool holder.

Neoprene mounting is used to minimize tap breakage and to compensate for misalignment. Bell mouthing and over-sized holes are claimed to be eliminated by full floating feature of mounting. All parts are alloy steel precision ground and heat treated. Made by **Burg Tool Mfg. Co.**, 5028 W. Jefferson Blvd., Los Angeles 16, Calif.

▲ Mention Item NED-700 when writing ▲

CIRCLE CUTTING ATTACHMENT



When mounted on Oxweld CM-16 oxy-acetylene portable shape cutting machine, this Under-the-Motor circle cutting attachment makes it possible to cut circles from 2-1/2 to 9 inches in radius. Principal advantage of unit is that metal can be utilized that ordinarily would be scrapped. Cutting can be performed to extreme edge of plate.

Radius of circle to be cut is regulated by means of adjusting screw. Circles above 9 inches in radius can be cut to edge of plate without attachment. Once unit is installed, normal cutting procedures are followed. Made by **Linde Air Products Co.**, 30 E. 42nd St., New York 17, N. Y.

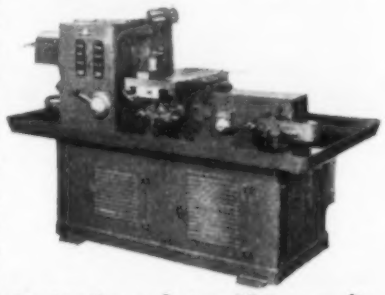
ELECTRIC HEAT FOR MODERN INDUSTRY

▲ Mention Item NED-708 when writing ▲

SEMIAUTOMATIC LATHE

Suitable for production greater than that possible with manually operated machines, model No. 650 lathe is semiautomatic. This single spindle machine is equipped with up to 7½-horsepower four-speed motor, hydraulic feeds and either single or double action cross slides, as desired. Pushbutton control station is located conveniently for operator. Hydraulically operated cross slide provides automatic cycle of fast approach, feed, dwell, fast retraction and stop. Motor supplies direct drive for ball bearing mounted spindle which is equipped with push-out or draw-in collet operated by hydraulic cylinder.



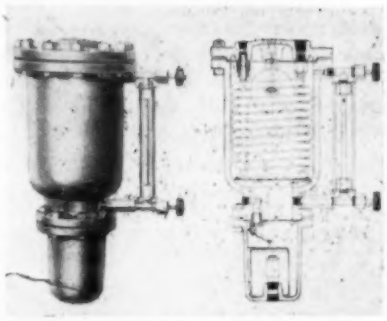
Cross slide is controlled through action of solenoid valve and lever. Cross slide can be controlled manually also. Hydraulic pump is driven by 2-horsepower motor and is located in base of machine. Automatic chuck is equipped with drawback collet with adjustable work stop in spindle. Centrifugal coolant pump, driven by ⅛-horsepower motor, is controlled by same pushbutton that controls hydraulic pump.

In many cases, two machines can be handled by single operator, approximately doubling production figures per man hour. Machine is particularly suitable for work where fully automatic or multiple spindle machines are not justified economically. Made by Oster Mfg Co., 2066 E. 61st Pl. Cleveland 3, O.

▲ Mention Item NED-709 when writing ▲

REFRIGERANT GAS PURGER

Gas purger for automatically separating and discharging noncondensible impurities in refrigerating system gas is claimed to operate at efficiencies ranging from 98 to 100 per cent. Unit is similar to former models except that refrigerating jacket has been replaced by internal coil. Use of coil increases condensing surface available for separating noncondensible gases from refrigerant by approximately 50 per cent. In addition, device incorporates noncondensible gas discharge mechanism in which ball float, used to activate valve, has been enlarged and valve itself improved.



Style No. 270 has semi-steel body for pressures up to 200 pounds per square inch. No. 870 has forged steel body for pressures up to 300 pounds per square inch. It is adaptable to systems of practically all capacities and operates with equal effeciency regardless of whether system pressure is above or below atmospheric pressure. Unit can be used on all commercial refrigerants including ammonia, Freon, carbon dioxide, and sulphur dioxide used in compression type systems. Use of purger reduces loss of gas to minimum. It can be used also in petroleum and chemical industries in gas purification processes. Made by Armstrong Machine Works, 819 Maple St., Three Rivers, Mich.

RUBBER LINK

FLOOR MATTING

NON-SKID REDUCES FATIGUE REDUCES BREAKAGE

Now . . . at last . . . a genuinely efficient, reversible floor matting! The attention of all industrial men is directed to L-CO rubber and fabric link matting for its thousand and one uses. Providing dry, almost indestructible, skidproof, shock-absorbing underfooting . . . L-CO cushions body-tiring floor vibration. Built to fit YOUR SPECIAL REQUIREMENTS. Weight 2¼ lbs. per sq. ft.

DISTRIBUTORS ATTENTION:

Generous profit-making discounts. Write, wire or phone for details.

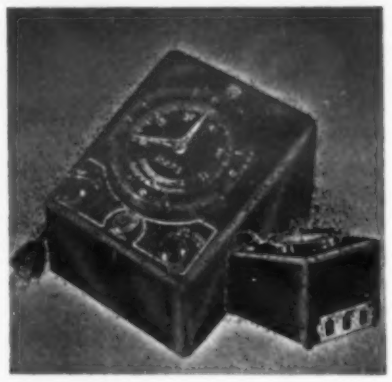
SYNCHRONOUS TIMER



Designed for direct control of loads up to 1 kilowatt at 115 volts 60 cycles, this synchronous motored Mars timer provides flexible control of wide range of industrial timing operations. It is equipped with multiple circuit switching whereby one electrical circuit is energized for preset time interval while another circuit is simultaneously de-energized for same interval. Standard receptacles are built into instrument case for connection of controlled circuits.

Rapid selection of any time interval from 1 to 75 seconds can be made on rim set dial located on control panel. One luminous hand indicates interval for which timer is set and another shows elapsed time during entire cycle. Cycle is started by pushbutton. Momentary contact switch can be provided for remote control. When cycle is completed, switching circuits are restored automatically to initial state and elapsed time indicator resets to zero.

Manual switch provides control of operation during adjustments or when it is necessary to synchronize operation to timer. Preset time can be extended or shortened during operation without disturbing timing interval. Power switch turns off all power when unit is not in use. Timer is housed in plastic case. Six-foot rubber cord and plug facilitate connection to electric outlet. Made by **Lancaster Products**, South Lancaster, Mass.

▲ Mention Item NED-718 when writing ▲

SELF-FLARING TUBE FITTING

Embodying advantages of both compression and flared fittings, this Uniflare two-piece fitting is self-flaring and applicable to many types of tubing. It can be used with tubing of various metals, including copper, aluminum, Monel, plastic, Bundyweld and varieties of steel within wide range of wall thicknesses. Units are available in sizes ranging from 1/8 to 3/4-inch in all usual commercial shapes.

When employed, plain end tubing is inserted in fitting and made up in conventional manner. Tube connection is self-extruded and self-flared by wrench action during makeup. Nut, body and thrust collar combine to produce same positive action as an extrusion press. Thrust collar shears from nut when wrench pressure is applied. Tube is shaped to 37-degree flare to make sound joint. Extrusion and coining action of parts produce leakproof joint which is reinforced against pressure and vibration. Joint can be made numerous times without danger of damage to original flared end of tube and without losing positive seal. Made by Brockway Co., Naugatuck, Conn.

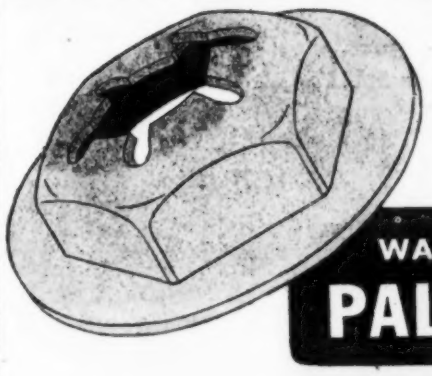
Sheet Metal Assembly —Better —Faster at Lower Cost with



WASHER TYPE **PALNUTS**

Handle ONE part *instead of THREE*

These inexpensive one-piece, self-locking Palnuts perform the same function as regular nut, lockwasher and plain washer combined. You not only replace three parts with a single Palnut, but power drivers may be used to further speed up assembly. Special sockets for power drivers pick up, spin on and tighten Palnuts in one operation. Once tightened, Palnuts stay tight under vibration — assured by their exclusive double locking spring action. Send for samples. Ask for engineering literature on entire Palnut fastening line.

SAFETY for men and material with

Elwell-Parker Trucks

- **POSITIVE "ON-OFF" CONTROL**—Truck cannot move unless operator stands on *both* pedals. Likewise it stops when he steps off.
- **SEPARATE OPERATION OF POWER AND BRAKE**—Invaluable when starting heavy loads on ramps, since power is applied before brake is gradually released. No fuses in power circuit but Elwell-Parker motors take the full electric current the battery supplies.
- **SAFETY CONTROL**—Drive controller turns to "off" the moment operator releases handle. Limit switches and electric brakes automatically control, and overload slip clutches protect the other motors.

Underwriters' Laboratories' UL Seal, ease of handling and extra ruggedness are other reasons why Elwell-Parker users *forget* truck safety problems. Call in the nearest Elwell-Parker man for the answer to your specific need.

VERTICAL INDUCTION MOTOR

Hollow shaft vertical motor, designed for pump drives, has been added to line of Tri-Clad induction motors. Motors are available in ratings from 1 to 500 horsepower and in all speeds and frequencies. Units are suitable for use on irrigation projects, deep well turbine pumps, municipal and industrial water supply projects, mine dewatering pumps and process industry liquid pumps.

Motors rated 10 horsepower at 1800 revolutions per minute and larger have controlled lubrication system which allows proper amount of oil to flow through bearings. Large oil reservoir, cast integral with motor end shields, has sufficient capacity to allow oil to cool and recover before being recirculated. Motors rated at 7-1/2 horsepower at 1800 revolutions per minute and smaller have grease lubricated bearings.

Self-release coupling on motors prevents damage to pump or motor caused by reversal. Motor can be lined up accurately and easily from top. Adjustment of pump shaft is accomplished by means of locking nut on top of coupling. Rotor windings in all ratings provide suitable starting torque with low current needed for full voltage starting. Made by **General Electric Co.**, Schenectady 5, N. Y.

NOW! HERE'S HOW TO QUICKLY AND EASILY BURR HOLES ON PARTS LIKE THESE—

Remove Burrs This Sure Way, Faster, Better, Easier!

With the New Nobur Tool you can burr faster — improve the finish of the deburred parts and lower production costs by eliminating burring as a bench operation. This New Nobur Tool speeds the burring of holes — and makes burring a fast, easy machine operation. It speeds production by cutting burring time to an absolute minimum.

The Nobur Tool works like a drill; it can be used in the spindle of any machine. The operator works with complete safety at all times and parts can be deburred as fast as they can be handled. All burrs are instantly removed — a double-edged cutting blade deburrs the edges of holes in flat or curved surfaces, of single or multi-walled parts, smoothly and accurately. The clean cutting action of the Nobur Tool will pass the most severe of inspections — it will help to eliminate reworks and repeats during assembly. Nobur Tool available in 1/16" progressive sizes from 3/16" to 1" in diameter. Write today for new complete burring folder.

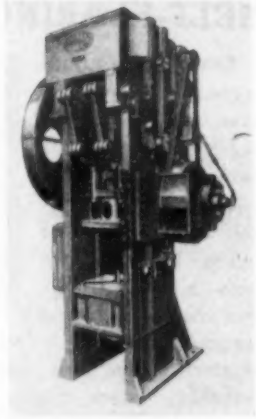
SINGLE CRANK TOGGLE PRESS



Wide range of deep drawing operations on steel, brass, copper, alumium and other metals can be performed with improved line of single crank toggle presses. Units are available in eight sizes having from 4-1/2 to 7-inch shaft diameter and from 8-1/2 to 24-1/2-inch stroke length. These dimensions are the same as in previous models, thereby permitting interchange of tools.

Steel weldment frame construction results in weight savings and reduced floor requirements as compared to previous models. Amount of bearing overhang is reduced and toggle driving mechanism provides crosshead with long guides at position where most needed. Clutch is single disk friction type with one-station electric pushbutton control. Air brake for stopping flywheel is included. Standard equipment includes radially T-slotted bolster plates, and direct-connected adjustable bottom lift outs to leave space between uprights free and clear. Gearing is guarded and is located approximately 8 feet above floor. Manifold lubrication system, with metal tube leading to each bearing, is standard equipment and can be replaced by semi-automatic or automatic lubricators if desired. Made by **E. W. Bliss Co.**, Dept. NED 450 Amsterdam St., Detroit 2, Mich.

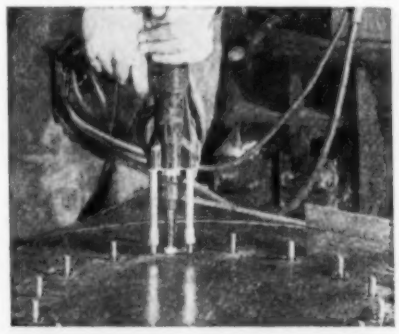
ELIMINATE DRILLING, TAPPING, HAND WELDING *with*



NELSON Automatic STUD WELDING

THE EQUIPMENT: The fully-portable 5 lb. Nelson "gun" handles studs from 1/8" through 3/4" in diameter, up to 8" long. Timer control unit furnished with gun automatically controls weld cycle; operator merely loads stud in gun, contacts weld surface, and pulls trigger. No skill or experience required; single operator can average 100 to 200 stud welds per hour. Gun and control unit operate from any suitable d.c. welding generator.

THE STUDS: Nelson flux-filled studs are available in plain or threaded types in all standard sizes, plus scores of special types such as eye and "J" shapes, female (hollow) studs, rivet studs, etc.

THE RESULTS: Elimination of punching, drilling, tapping, hand-welding or similar slow stud installation operations speeds production, cuts costs. Strength of weld exceeds that of the stud, and all welds are uniform.

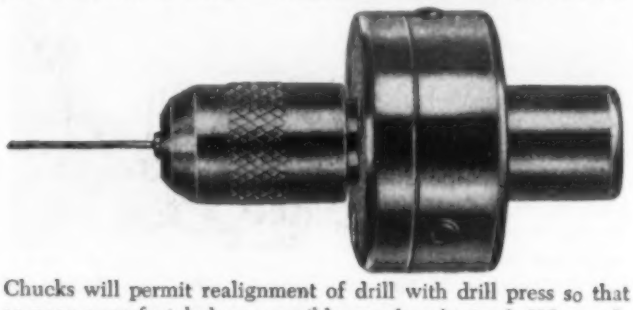
ADJUSTABLE COLLET CHUCK

Capable of being adjusted to absolute concentricity, Micro drill chuck is available in two collet sizes, smaller size ranging from 0.005 to 0.025-inch and larger from 0.02 to 0.04-inch.



Chucks will permit realignment of drill with drill press so that as near a perfect hole as possible can be obtained. When adjusting chuck to drill spindle, straight rod about 0.02-inch diameter should be inserted and locked in collet. By adjusting screws, rod is brought into alignment and locked into position. Once alignment is made, it is necessary to realign chuck when new drills are used. Made by **Chicago-Latrobe Twist Drill Works,** 411 W. Ontario St., Chicago 10, Ill.

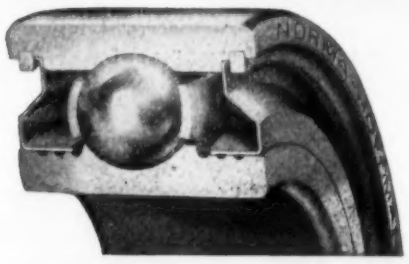
HELPS SOLVE DESIGN PROBLEMS



NORMA-HOFFMANN'S "CARTRIDGE" BEARING
PATENTED

How It Solves Design Problems:

- 100% more grease capacity.
- Factory grease packed; effective for years of service.
- Grease retained close to balls and raceway by built-in, wearless seals.
- Flanged seals, grease grooves keep grease in . . . keep dirt out.

Why It's a Better Bearing:

- Eliminates up to 10 machining operations and over 22 parts vs. some conventional mountings.
- Prevents slippage, peening, cocking.
- Increases shaft strength; reduces overhang.
- Improves appearance; provides compactness. No projecting screws nor plugs needed.

MATERIALS TESTING DEVICE

Adaptable to production testing of metal castings, forgings or finished machined parts as well as plastic or ceramic parts, this ultrasonic materials tester will indicate presence of voids, cracks, laminations, poor bonds and other internal flaws. Instrument can be used to indicate changes of viscosity, compressibility and density of liquids when they significantly alter velocity of attenuation of ultrasonic transmission.

Unit is fully portable and self-contained. It provides direct reading and is easy to use. In operation, tester sends beam of ultrasonic waves through specimen being tested. Changes in amount of energy transmitted through specimen are indication of presence and extent of flaws. Testing is not affected by small changes in dimensions or position of test pieces. To examine regularly shaped pieces, two transducers are immersed in tank containing water and specimen inserted between them. Ultrasonic waves are sent through specimen and resulting reading on indicating instrument is compared with that for specimen shown to be sound by x-ray.

Instrument consists of complete wide band ultrasonic transmitting-receiving system having high frequency generator, crystal transducer, satisfactory medium such as water to transmit vibrations and indicator for inspection analysis. Made by General Electric Co., Schenectady 5, N. Y.

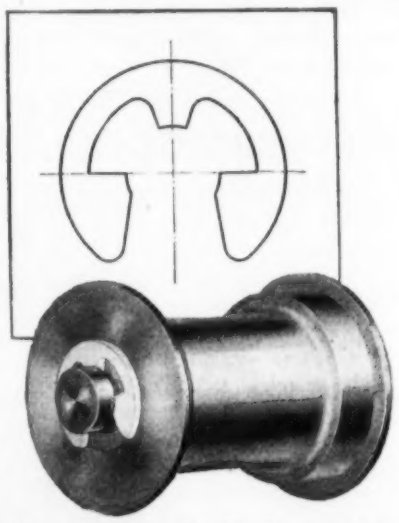
SHAFT RETAINING RING

Suited particularly for small shaft applications, E-shaped Truarc retaining rings provide unusually large and uniformly protruding shoulder on shafts ranging upward from 3/32-inch in diameter. Ring is sprung into comparatively deep groove and is designed to withstand considerable thrust loads. Three equally spaced protrusions form abutments in groove of shaft. Recesses between protrusions make ring sufficiently resilient to permit necessary spread for easy, quick assembly and disassembly without permanent set.



Requiring no special tools, rings are installed in radial direction. They are suitable for use where shaft is inaccessible in longitudinal direction. Applications include use in business machines, radios, household appliances, instruments and other equipment as well as for assembling chains, clevis pins, etc. Distributed by Truarc Sales Div., Waldes Kohinoor, Inc., 47-10 Austel Pl., Long Island City 1, N. Y.

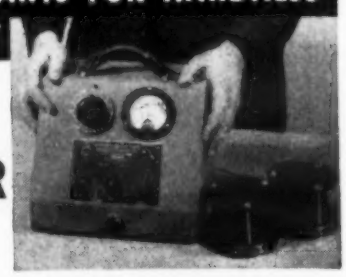
TEST FERROUS PARTS FOR HARDNESS
. . . at 1200 per hour



MAGNETIC COMPARATOR
Only $195
(plus coils)

TWO WEEK SHIPMENT can be given you now on this rapid, quality control instrument

Here's a quick method of controlling quality of ferrous metal parts, or separating mixed steels. Nondestructive and simple. Just preselect a standard of the same size and shape, and the Magnetic Comparator will detect differences in hardness, composition, heat-treatment . . . or any characteristics which alter the resistivity or magnetic properties.

Ideal for production line! You can check rods, bolts, springs and similar fabricated parts at the rate of 1200 per hour. Distinguishes between steels whose hardness differs by as little as two points Rockwell.

The Magnetic Comparator is a small, portable instrument. Compares the similarity of ferrous alloys by means of magnetic coils. Inspected parts must be identical in size and shape, but slight irregularities are acceptable. Not affected by surface conditions. Makes quality control quick and easy. **Write for bulletin GEA-4169, or order from your nearest G-E Office.** *Apparatus Department, General Electric Company, Schenectady, N. Y.*

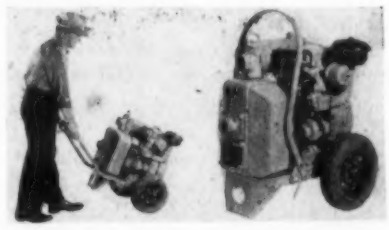
CENTRIFUGAL PUMPS



Pump body of this improved Rex self-priming centrifugal pump is press formed of Armco ingot iron which is highly resistant to corrosion. Another advantage of design is savings in weight over former model (*Item NED-2248 May '42*). In the 2-inch size, weight saving is claimed to be 90 pounds over cast iron design.

Press formed body resists cracking or shattering under heavy loads or in freezing weather. It can be repaired readily by welding. Smooth surface of pump and press formed volute design result in increased efficiency of pump. Made by Chain Belt Co., 1686 W. Bruce St., Milwaukee 4, Wis.

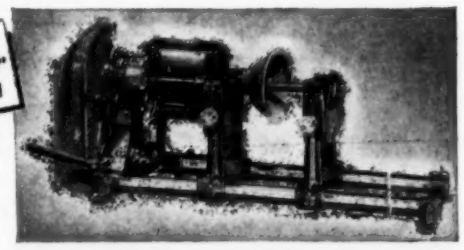
WHY SHIP "WOBBLIES" WITH YOUR PRODUCT?
. . . Bear-Balancing Defeats Them!

"Wobblies" of static and dy-namic unbalance are nobody's friends — yours or your customers. That is why improved standards, and sales opportunity as well, are bringing so many manufacturers to BEAR-BALANCING of rotating parts. Bear-Balancing is more economical. Any shop hand learns Bear-Balancing in less than a day.

Bodies are accurately balanced, statically and dynamically, to any recognized standard, and the operation fits readily into production sequence. All Bear balancers are widely adaptable within their range, all are very reasonably priced. Write for brand-new Bear literature . . . chase Wobblies, improve both product and sales! BEAR MFG. CO., Industrial Div., Dept. N-5, Rock Island, Ill.

WRITE for NEW "340" BULLETIN!



Bear Balancer Model 340 handles most balancing work in this industry.

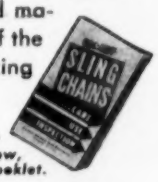
Just one of the big advantages of HERC-ALLOY Sling Chains is that you can determine their serviceability by a simple visual inspection.* Ordinary steel or iron chains, on the contrary, grow dangerously brittle with age . . . an insidious threat to the safety of men and materials. That's why more and more of the important companies are standardizing on HERC-ALLOY Sling Chains . . . because you can see for yourself that they're safe.



**Write for your copy of this new, informative booklet. No charge.*

HERC-ALLOY FEATURES

- America's *first* alloy steel sling chain . . . first to bear a serial number.
- Every CM HERC-ALLOY Sling Chain is alloy steel throughout . . . links, rings, hooks. There is only one grade . . . *the best.*
- Every chain is individually tested and accompanied by a certificate of registration.
- Links are side welded for maximum strength by patented INSWELL electric method.
- HERC-ALLOY Chains should *never* be annealed.
- HERC-ALLOY Chains are lighter . . . stronger . . . easier to handle . . . outlast ordinary chains 4 to 5 times . . . cost less on the job.

HERC-ALLOY . . . the chain you can *SEE* is safe

SEALED MERCURY RELAY

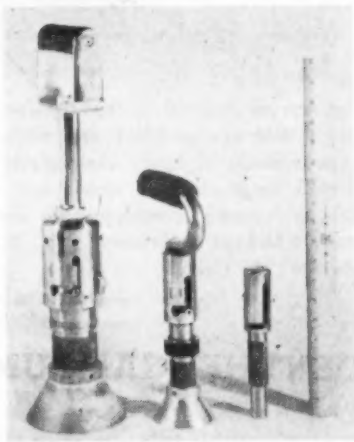
Rated at up to 35 amperes on 110-volt alternating current, this Hermaseal plunger type mercury relay is available in normally open or normally closed models for safe positive operation. Contact units are hermetically sealed. Relays operate on principle of displacement. Normally open model MR-8 relay has floating plunger which is pulled downwards, when coil is energized, to displace mercury. Mercury floods electrode inside cup and closes circuit. In normally closed model MR-16 relay, weighted plunger is pulled out of mercury when coil is energized and contact opens.

Illustrated model MR-8, with terminal block, is 4 inches high and 2-5/8 inches wide and projection is 2-1/8 inches. Mounting bracket is slotted for two size No. 8 or No. 10 mounting screws. Maximum centering spacing is 2-1/4 inches.

In operation there are no exposed parts and contact pitting is eliminated. Contact resistance never increases. Liquid mercury-to-mercury contact is unaffected by dust, dirt and moisture. Normally open model No. MR-10 is equipped with lock-in contact. Made by **Hermaseal Co.**, Elkhart, Ind.

▲ Mention Item NED-767 when writing ▲

STUD DRIVING TOOL



Employing exploding cartridge as source of power, this Tempotool stud driving hand tool will drive pin or stud into steel with sufficient force to set them firmly. Models 22, 38, and 45 are capable of driving studs or pins through ⅛-inch steel or concrete, ⅝-mild steel and 1¼-inch thick mild steel respectively. In operation, imparted force is similar to that of firearm. Explosion drives pin or stud through short barrel and into steel.

In addition to drive pins, which are used mainly for fastening purposes, both male and female threaded studs are available, latter to accommodate bolts or threaded rods. In this way, large objects can be fastened directly to seated stud.

Stud driving tool was originally developed for wartime use and it is claimed to have wide peacetime applications. Tool is particularly useful in securing bus duct supports to concrete and steel, attaching angle iron machine frames to concrete floors and securing conduit straps to cement or steel framing. No wiring or air lines are necessary for operation so that tool can be used in any location. No drilling is required. Cartridges of three different power charges are available for the Nos. 38 and 45 units. Made by **Tempo Products Co.**, 740 Superior Ave., N.W., Cleveland 13, O.

HERE is where you can cut cleaning costs

A long-lived nozzle makes all the difference in the world between high and low cleaning costs. Quick enlargement of the nozzle bore wastes costly air, spreads the abrasive stream into an ineffective pattern, reduces its velocity and hitting power, lengthens labor time, decreases cleaning effectiveness.

If the nozzles you are using require frequent replacement, let us show you how an American Nozzle will solve your problem once and for all, and save you money over the cheapest nozzle you can buy.

Write for your copy of the new free catalog on American Airblast Nozzles. Contains complete and comprehensive information, specifications and prices.

COMPACT DESIGN

In many temperature control applications, space is so limited that the physical size of the thermostat is important. The simplicity of the basic Fenwal design makes possible the combining of all the essentials of a good Thermotechnic instrument—high sensitivity, ruggedness and accuracy—in a unit of reasonable size and convenient dimensions—the Fenwal THERMOSWITCH Control.

In normal applications, Fenwal's compact units usually may be located in the product or process at the point where most effective control of the entire thermal system is achieved.

The drawing shows the dimensions of the Cartridge THERMOSWITCH Control—the basic THERMOSWITCH unit. Because of their compactness, Fenwal THERMOSWITCH Controls provide effective temperature regulation without interfering with the overall design of the product or process.

HOW ROLLING CONTACT SAVES MONEY

Rolling Contact eliminates friction and enables the Lad on Roller Skates to glide with little effort over Cement Walks where Ice Skates which employ Sliding Contact, would be useless because of friction. The Roller Toggles shown in the cut below, employ Rolling Contact, enabling MULE-PULL CLUTCHES to develop with little effort on the part of the operator, the POWERFUL, PERSISTENT PULL for which they are noted. These one-arm Toggles require no lubrication, have long life and seldom need replacement, even under constant in-and-out engagement. Another money-saving feature of value to you is the RING-OILING SYSTEM used on the Loose Pulleys of these clutches. This is proportional to the speed: needs filling but once in 30 to 90 days and protects you against ground-out Pulleys, scored Shafting and expensive shut downs. Over 25,000 MULE-PULL CLUTCHES are in daily use.

MATERIALS HANDLING TRUCK

For handling unit loads mounted on disposable carrier sheets, this Pul-Pac materials handling attachment for Clark forklift trucks has gripping device that moves forward, clamps extended margin of carrier sheet and pulls sheet and load onto truck. At destination, load will be lifted and registered directly over area where it is to be deposited and pusher device will shove carrier sheet and load into position.

Attachment consists of hydraulically operated push-pull device and flat steel plate serving in place of conventional forks. Disposable sheets can be made of corrugated paper board, fiber board or other material. Advantages claimed for system include reduced pallet costs, increased storage area, reduced freight cost and elimination of pallet maintenance. Carrier sheet will serve as car liner during shipment. Truck attachment made by Clark Tructractor Div., Clark Equipment Co., 1952 Arze St., Battle Creek, Mich.

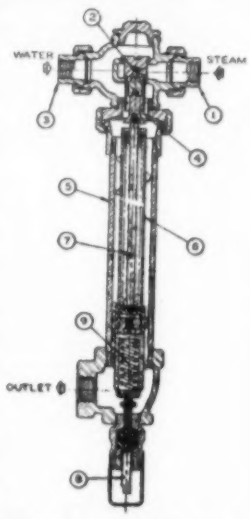
STEAM & WATER MIXER

Ample quantities of hot water for industrial plant showers and washrooms, as well as for hot water process requirements, are provided by this improved model steam and water mixer. Compact in size, unit can be used on steam pressures of up to 125 pounds per square inch, but steam pressure must be 20 per cent higher than water pressure. Overall size is 26 inches long and 5 inches in maximum width.



Steam enters at 1 and goes through valve 2 as indicated in illustration. Cold water enters at 3 and mixes with steam in injection chamber 4. Resulting mixture of hot water enters housing 5 and then flows over hermatically sealed thermostat. Hot water flow causes liquid filled thermostat to expand to push forward plunger 7 to close valve 2 and cut off steam at temperature set at 8 by key. Body 5 cools by radiation and liquid in thermostat 6 contracts so that plunger head 7 opens valve 2. In operation, balance is secured which holds valve open sufficiently to maintain desired temperature. Relief spring 9 prevents damage from accidental overheating.

Construction is brass with renewable valve heads and seats of stainless steel. Union connections are provided on steam and water inlets. Built-in liquid filled thermostat assures automatic control of water temperature which can be set at any required amount. Typical of capacity is delivery of 200 gallons per hour of water with temperature rise from 50 to 120 F, using steam at 75 pounds per square inch. Made by Sarco Co., 475 Fifth Ave., New York 17, N. Y.

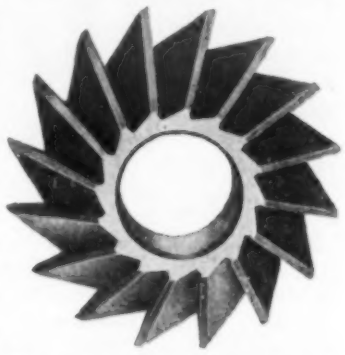
CAST CARBIDE

Available in full range of tool bit sizes, in circular form tool blanks and in shapes for making dies, bushings, bearings and gages, Cadmet cast carbide is said to have exceptional hardness and wear resistant properties. Material is tough and can be cast into full length bits or intricate shapes without danger of breakage. It cannot, however, be heat treated.



Recommended uses for cast carbide include parts requiring maximum wear resistance at high temperatures and special shaped tools. With improved precision casting techniques, little or no grinding is necessary. Internal and external threads, shoulders and cored holes can be produced. Sizes up to 3 inches in diameter and up to 3 pounds in weight can be cast. Made by **Casting Development & Mfg. Co.**, 4506 Wayne Ave., Philadelphia 44, Pa.

Yes . . . it's just that easy, to resurface holes or rough spots in concrete floors with ADAMITE CEMENT.

Here's why:

Nothing to add but water—bonds perfectly to the old floor—guaranteed not to shrink—compression strength three times that of concrete — absolutely impervious to oil — produces a PERMANENT patch in as little as 6 hours.

Used by Army, Air Corps, General Motors, International Harvester.

If you have never used Adamite, you are due for a new and sensational experience.

Write today for our Bulletin 120.

Cut Materials-Handling Costs . . .

One man can unload a truck quicker, and with less fatigue, when he uses a lightweight portable gravity conveyor.

● THE LAMSON LIGHTWEIGHT PORTABLE GRAVITY CONVEYOR can be set up quickly to expedite the unloading or loading of freight, and deliver freight to or from any section of warehouse or dock storage.

Packaged merchandise is carried from basement storage and delivered to shipping department as required, over Lamson Roller Gravity and Belt Conveyors.

● LAMSON ROLLER CONVEYORS are saving time and cutting costs in many plants throughout the country. Adaptable to handling all types and kinds of containers.

Tiering with a Lamson Utility Conveyor. Adjustable to various angles.

● LAMSON UTILITY CONVEYORS can be used anywhere for loading, unloading and tiering. Serves as an auxiliary to portable or built-in plant conveyor systems.

LAMSON CORPORATION
550 Lamson St., Syracuse 1, N. Y.

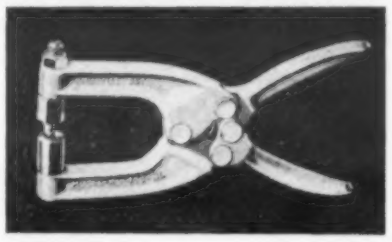
SHEET METAL ALIGNING TOOL



Several sheets of metal can be aligned quickly in position for riveting, spot welding or drilling with this model KL-450-HL hole locator. Device looks like ordinary pliers and operates as simply. Toggle action automatically locks upon work held so that operator's hands are free to perform other work. Pressure spindle can be adjusted to admit work up to 1¼ inches thick and locating pins are available in most widely used diameters. Unit is 8 inches long and 3 inches wide. It is capable of holding maximum of 500 pounds. Made by **Knu-Vise, Inc.**, 2212 Eighth St., Detroit 16, Mich.

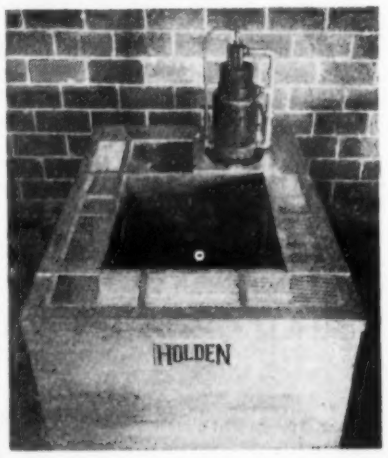
▲ Mention Item **NED-805** when writing ▲

GRAIN CEMENT & THINNER

Adaptable for use as adhesive for polishing wheels, grain cement and thinner is of improved type. Material is said to overcome deficiencies of organic glues. Grain cement and thinner has been used for a number of months with success. Special instructions relative to use are mix thoroughly before application; pound and work grain into wheel; be sure wheels are dry; and make several wheels with different mixtures to find correct one for job. Made by **Hanson-Van Winkle-Munning Co.**, W. Church St., Matawan, N. J.

▲ Mention Item **NED-806** when writing ▲

QUENCHING FURNACE

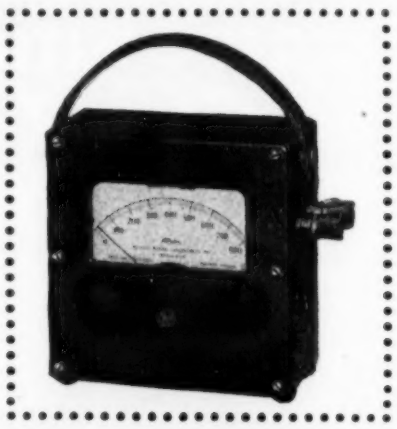


Heated by either gas or electricity, Marquenching furnace is production unit with normal operating range of 350 to 750 F for Martempering and from 500 to 750 F for Austempering. Parts are quenched in furnace and cooled to point where they are at bath temperature, then cooled to finished transformation of martensite.

Furnace embodies five features. Positive action pump circulates liquid completely every 3½ minutes. Liquid is pumped into troughs and back over spillway into pumping section, producing positive cooling area. Additional cooling is produced by blowing air at 16 ounces of pressure for any volume under spillway. Series of screens provides positive method of filtering out hardened salt and scale. Automatic control of temperature is provided in both quenching and cooling areas.

Three models are available, with pot dimensions of 24 x 26 x 40 inches, 36 x 26 x 40 inches and 36 x 36 x 40 inches. Productive capacity of model illustrated, which has pot dimensions of 36 x 26 x 40 inches, is 500 to 700 pounds of work per hour quenched with hardening temperature range to temperature of 400 F. Made by **A. F. Holden Co.**, 200 Winchester Ave., New Haven 8, Conn.

▲ Mention Item **NED-807** when writing ▲



TYPE 1500

Alnor PORTABLE PYROMETER

This compact, lightweight pyrometer is mounted in a magnetically shielded metal case, providing for accurate temperature readings in shop and general industrial use as well as in the laboratory.

The pyrometer movement is the Alnor double air gap type with Alnico magnet. The case is heavy gauge sheet steel, providing magnetic shielding so that Type 1500 may be used on a steel top table, near other magnetic instruments or in strong alternating fields without suffering the unpredictable errors experienced with unshielded pyrometers.

Type 1500 is available as a single circuit pyrometer with a choice of ten scale ranges, 0-400 to 0-3000 F, or as a double or triple range instrument built to order with scales as specified. Centigrade scales can be furnished. Write for descriptive bulletins.

One thing is sure . . . you can safeguard such equipment as motors, transformers, solenoids and adjustable transformers against overheating and burning out by incorporating Klixon protectors in this type of equipment.

Built in as an inherent part of the apparatus, Klixon protectors match the thermal characteristics of the equipment, thus assuring full protection without limiting full rated output.

When temperature within the apparatus reaches the danger point, the Klixon protector opens the circuit preventing possible burnouts. As soon as the equipment cools to a safe operating level, the protector recloses the circuit either automatically or waits for manual reset depending on the type of protector used. Harmless momentary overloads do not cause nuisance tripouts. Specify and insist on Klixon.

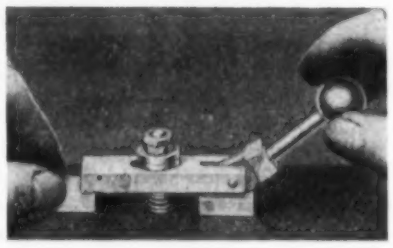
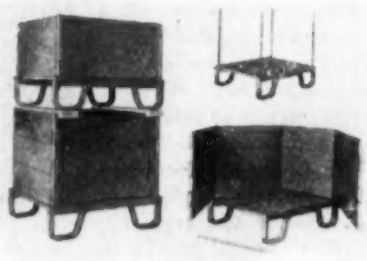
MIDGET FIXTURE CLAMPS



Series of small fixture clamps for easy holding of small work pieces is named Westpo Midget. Four styles of clamps, including quick action clamps, are offered. Clamp strap is only 2½ x ⅝ x ⅜-inch in size. Spherical washers with ground radii compensate for irregularities in work. Clamps are made of steel, heat treated and cadmium plated. Made by **West Point Mfg. Co.,** 19627 Merriman Ct., Farmington, Mich.

▲ Mention Item NED-815 when writing ▲

COLLAPSIBLE STEEL BOXES



Design characteristics of this collapsible steel box for skid platforms permit numerous combinations for wide range of industrial materials handling applications. Skid platforms are provided with sockets to receive 1-inch standard pipe which serves as corner post. Panels for sectional boxes are 12 inches high and have loops of steel that engage with pipe stakes in platform. Panels are then slipped over pipe stakes and can be built up to any height. Each panel reinforces adjacent panel so as to withstand high loading.

It is possible to equip skid platform with sides only, with ends only or any combination thereof. It is also possible to leave out any portion of a side to facilitate loading and unloading of materials. Illustration shows how skid platform can be used with corner stakes only and also how boxes, when loaded, can be tiered one on top of another with no difficulty.

Wooden or metal shelves can be inserted between panels to form portable shelves. There are no bolts or screws required in constructing sectional box, and when not in use boxes can be stacked to occupy minimum amount of space. Made by **Market Forge Co.,** 54 Garvey St., Everett 49, Mass.

THE CN-2 ABRASIVE BELT GRINDER

Comprising Resilient Contact Wheel—Idler—Abrasive Belt—Platen—Driving Pulley and Arbor—Motor mounting (Electric motor not included)

KEEPS PRODUCTION HIGH ALL DAY

Your operators find belt grinding easier because the grits are exposed for work . . . They do not have to "lay on" as they do with an abrasive or loaded wheel . . . and production stays high because they do not suffer "3 o'clock fatigue."

The CN-2 eliminates wheel loading . . . wheel digging . . . wheel dressing. Grinds on contact wheel, platen, or free belt.

CN-2 increases output over ordinary bench grinder by 200%! Use the CN-2 for deburring, bevelling, chamfering, clean-up, knocking-off corners . . . In many other operations in assembling and machining departments, tool rooms, job shops, service stations.

Arbor for contact roll and V-pulley permits use of unit independent of a bench grinder. Easily adjusted for vertical or horizontal use within 90° arc. Weighs only 15 lbs. Write today for full information on CN-2 Abrasive Belt Grinder.

ELECTRIC STEAM BOILER

Steam pressures of up to 200 pounds per square inch and output of up to 2 boiler horsepower can be attained with this Speedylectric electrically operated steam boiler. Unit employs solid rods for electrodes and utilizes water between them as resistance element. This provides for production of sizable volume of steam, about 65 pounds per hour, at any desired pressure in small diameter vessels. Boiler will not be damaged by low water condition because absence of water between electrodes stops operation of boiler.

Boiler control mechanism can be set for any desired pressure by turning dial control. Pressure will be maintained steadily and automatically. When boiler is used for industrial applications such as with plastics molding press, press can be located where convenient and operated any time of day or night. Boiler is recommended also for use with tire recapping devices, steam and solvent cleaners, sterilizers, fur glazers, millinery steamers and laboratory installations. Made by Livingstone & Co., 89 Broad St., Boston, Mass.

▲ Mention Item NED-824 when writing ▲

ELECTRONIC WELDING TIMER

Providing interval timing for welding operations over range of from 3 to 120 cycles, type 30CR3 electronic welding timer is applicable to all manual, air or motor operated general purpose spot welding equipment. Accuracy throughout range is within 2 per cent. Timing adjustment is located on panel inside housing to provide tamperproof setting. Timer can be used on either 115 or 230-volt alternating current.

Proper selection of terminals on terminal panel will provide beat or nonbeat timing. Panel has dead front so that there is no danger of operator touching terminals when setting timing interval. Made by Photoswitch, Inc., 77-89 Broadway, Cambridge 42, Mass.

Have you a Corrosion Problem?

INVESTIGATE Beckman pH CONTROL

An efficient solution to many plant corrosion problems—often without the need for hard-to-get corrosion-resisting alloys!

Investigate TODAY what Beckman pH Control can do in solving YOUR corrosion problems. Because Beckman pH Control neutralizes corrosive solutions BEFORE they contact costly plant equipment, hard-to-get corrosion-resisting materials are often unnecessary. For example . . .

IN COOLING SYSTEMS water absorbs CO_2 in cooling towers, forming carbonic acid and becoming increasingly acidic as water is recirculated. This causes excessive corrosion of machines, condensers and other plant equipment.

SOLUTION: Many plants now guard against these risks by Beckman-controlling pH of cooling water, thus automatically maintaining it at optimum pH for minimum corrosion.

LET US HELP YOU get longer life, better efficiency from your plant operations through BECKMAN pH Control. Outline your problem to our engineering department for a recommendation.

SEND FOR DESCRIPTIVE LITERATURE

DIETZGEN *Ageproof* VELLUM

The perfect tracing medium . . . product of the plastic age

If you want a tracing vellum that combines a perfect drawing surface, clear transparency for reproduction and long-life durability, then you want Dietzgen *Ageproof* Vellum.

For this vellum is a scientifically created sheet, made from 100% all white rag stock, resin-bonded to provide a permanent structure, plasticized through and through for ageproof transparency, able to withstand repeated erasure and correction without impairment to its drawing surface, without ghosting, feathering or blots. Dietzgen Ageproof Vellum uses NO oil, wax or grease in its manufacture, cannot turn yellow with age, or become brittle, cannot lose its transparency, cannot bleed oil to other drawings, cannot pick up dust, cannot turn rancid. Users say Dietzgen Ageproof Vellum has no equal. Test it in any way. Dietzgen Ageproof Vellum is available in rolls and sheets of all needed sizes. Ask your regular Dietzgen dealer or the nearest Dietzgen office listed below.

HARDNESS TESTING UNIT

Adaptable for testing rounds and flats up to 1 inch, this Ames hardness tester is fully portable. Unit weighs less than 2 pounds and is accurate, fast and easy to use. Anvil, diamond penetrator, Lucite magnifier and stainless steel frame comprise testing unit. Screw action rather than weights and levers is employed to check hardness. Pressure is applied in kilogram loads to force penetrators into material. Applied pressures cause C-frame to spring, thereby moving indicator pointer to graduations on dial. Graduations on barrel dial denote hardness in both Rockwell B and C scales. Tester is rustless and durable and is furnished with wooden carrying box. Made by **Ames Precision Machine Works**, Waltham 54, Mass.

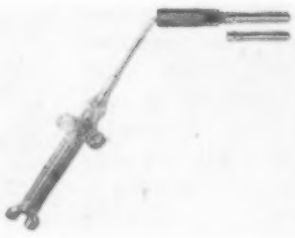
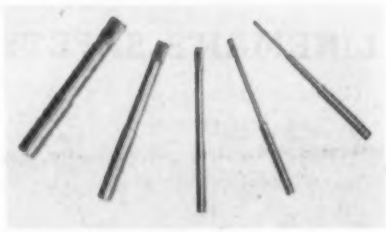
WELDING TORCH ATTACHMENT



Capable of fitting over the end of any standard welding torch tip, this Cesco Puddler torch accessory has two tips for light duty soldering and body soldering. It can be used with acetylene alone and provides ideal flame for body soldering, tinning, silver soldering and heating jobs. Made by **Cesco Products, Inc.**, 30 N. LaSalle St., Chicago 2, Ill.

▲ Mention Item NED-834 when writing ▲

CARBIDE GRINDING WHEELS



Midget solid carbide grinding wheels, developed for grinding in small holes, are available in standard sizes ranging from 0.030 to 0.250-inch in diameter. Advantages claimed include complete finishing of hole to close tolerance, removal of metal of any hardness including Stellite, and high modulus of elasticity which triples stiffness of cutter shank and permits maximum cutting action without distortion or tapering of holes. Wheels can be resharpened several times with little change in diameter or shape. Maximum production speed and economy are claimed for wheels.

Carbide reamers in sizes from 0.035 to 0.250-inch are available. They will ream and restore to required dimensions small holes that have been distorted by heat treating. No annealing is required. Metal to 62-65 Rockwell hardness can be handled.

Midget carbide burrs are for use in manufacture of steel dies and aircraft engine parts. Plastics also can be worked successfully with these burrs. Manufactured by **Raymac Co.**, 3729 Cass Ave., Detroit 1, Mich.

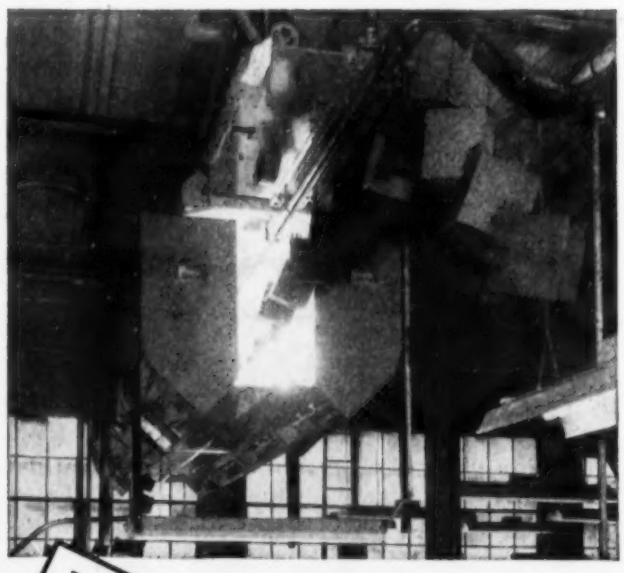
HOW 5,000 PLANTS CUT COSTS



Typical Example of Savings with INFRA-RED

PRODUCTION TRIPLED — France Mfg. Co., Cleveland, bakes the finish on transformer cases 3 times as fast with EVENRAY than previously with forced air drying. Baking time is only 5 minutes. 3,000 cases are baked in 8 hours with this system. Space is saved by suspending the Evenray oven from the ceiling.

ONLY FOSTORIA EVENRAY EQUIPMENT HAS ALL THESE ADVANTAGES—

1. **Lower Unit Operating Cost** — Greater efficiency of gold reflectors requires lower connected load — provides maximum utilization of energy.
2. **More Uniform Coverage** — Evenray equipment design gives extraordinarily even distribution of energy on products being processed — as little as 2% variation.
3. **Maximum Temperature Range** — Delivers up to 125 BTU's per square inch per hour. Accommodates from 80 watt to 1000 watt lamps for fastest processing according to job requirements.
4. **Maximum Engery Utilization** — Two-wall oven construction and gold interior reflecting surface provide most effective insulation; it puts the energy on the product.
5. **Complete Line of Equipment** — Evenray models are available for spot heating or full ovens, utilizing clear or reflector type lamps; permitting a choice for best results depending on nature of product to be processed. Flexibility of construction permits quick and easy alteration or addition for production changes.
6. **Approved Electrical Construction** — Listed under Re-examination service of Underwriters' Laboratories, Inc.

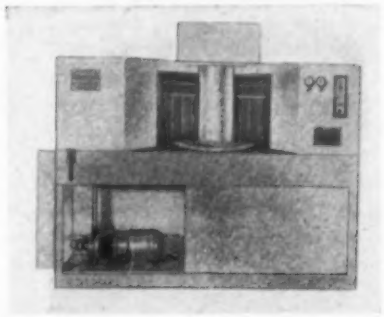
TURNTABLE PARTS CLEANER



Designed for handling small and medium sized parts, turntable type washing machine rinses and dries metal parts in baskets, in trays or individually. Only one operator is required to load and unload parts for cleaning. Machine is completely self-contained and requires little floor space in which to achieve average production of 60 baskets per hour. According to size of machine, baskets are 12 x 12 inches, 16 x 16 inches or 20 x 20 inches and load capacities are 1800, 2500 or 3000 pounds. Washer is available in three standard sizes and can be constructed to meet special needs where centering of parts is essential. Heat can be supplied by steam, gas, oil or electricity. Made by **Mabor Co.**, Route 3, Box 77, Rahway, N. J.

RIGHT ANGLE DRIVE

Adaptable for driving tube expanders used through small headers and in relatively inaccessible places, this right angle gear drive is made in sizes for 1/2, 3/4 and 1-inch square connections. Gear drive is enclosed in one-piece housing. It has minimum number of moving parts. Unit is completely enclosed. One-shot lubricator provides lubrication that will last for long period. Grip is knurled for ease in handling. Made by **Airetool Mfg. Co.**, 210 Shuey Bldg., Springfield, O.

LINEMAN'S SAFETY BELT

Combining features of web and leather construction, No. 625 PP Strauss lineman's safety belt weighs 3 pounds. Belt is made of Diamond Stripe web strap 1-3/4 inches wide and 5/32-inch thick, with tensile strength of 4500 pounds. Inside strap is fitted 4-inch wide web body pad which in turn is lined with soft, pliable leather. Rivet burrs are positioned between web and leather layers. Tool loops are oak tanned harness leather 1-1/4 inches wide, attached to belt by copper rivets. Attachments include snap, leather plier and tape holder. All hardware including slip-ring buckle and Dee rings is constructed from drop forged steel. Made by Portable Safety Div., **Portable Products Corp.**, 501 Blvd. of the Allies, Pittsburgh, Pa.

Skilled Lighting FOR SAFER LIGHTING

Wheeler DUST-TIGHT Fluorescent Lighting Units

FOR HAZARDOUS LOCATIONS

For "Skilled Lighting"—plus safety—use Wheeler DUST-TIGHT Fluorescent Fixtures. They meet Underwriters' requirements for Class II, Group G and F, and Class III and IV Hazardous Locations. They bring 64 years of engineering experience in safe lighting to many other locations where lamps, sockets and reflecting surfaces must be protected from non-combustible dusts and vapors.

Class II-G DUST-TIGHT Units are all-steel construction. Made in two and three lamp 48", 40-watt units. Available with Water-White Plate Glass, Tempered Clear Safety Plate Glass or Double Thick Plain Clear Glass hinged, dust-tight covers.

Write for complete data sheet. **Wheeler Reflector Company, 275 Congress St., Boston 10, Mass.**; New York, N. Y. Representatives in principal cities.

with a STOW FLEXIBLE TOOLSHAFT YOU CAN Operate in Any Position

For Easy
• Grinding
• Buffing
• Drilling
• Polishing
• Sanding
• Bench Work
• Assembling

THE STOW FLEXIBLE TOOL-SHAFT can be attached to your bench-mounted motor, or to portable power unit, either electric or gasoline. Is easy to connect and disconnect to various tools. And its ample length and easy flexing make it ideal for reaching inconvenient places.

Every shop should have at least one STOW Flexible Tool-Shaft. For, in combination with the proper attachments, mechanics and maintenance men will find it indispensable in hundreds of important operations. Write for full details, or see your mill supplies or hardware dealer.

SMALL MILLING MACHINE

Measuring 14½ inches high, model No. 0000 knee-type milling machine is designed for manufacture of small parts. Machine has 6-inch longitudinal travel, 1½-inch traverse and 4-inch vertical movement. Table movement is accurate to 0.001-inch and runout of spindle is held to 0.0001-inch. Milling machine can be mounted on bench, table or pedestal which is available as accessory. Drive is by means of double V-belt up through center of column.

Nine changes of speed are obtainable through countershaft and jackshaft. Speeds from 280 to 11,150 revolutions per minute are possible. Ground alloy steel No. 5 B & S taper spindle is driven by V-belts from countershaft. Solid rectangular overarm slides in scraped dovetail ways and is clamped in place by two locking levers. Arbor support can be supplied with bronze or Torrington needle bearing, oiled from cup on support. Spindle, longitudinal, transverse and elevating screw bearings are permanently lubricated sealed type. Four feed dials have knurled locking screws and are graduated in 100 graduations, each indicating 0.001-inch movement. Recommended motor is ½-horsepower for normal work, but 1/3 or 1/4-horsepower motor can be used for light work.

Milling machine is designed for use in tool and die shops, laboratories, experimental shops and vocational schools, and by instrument makers, watchmakers, gunsmiths, fountain pen and mechanical pencil manufacturers and fabricators of electrical and electronic equipment. Made by Childs & Co., 213 Sixteenth St., Conneaut, O.

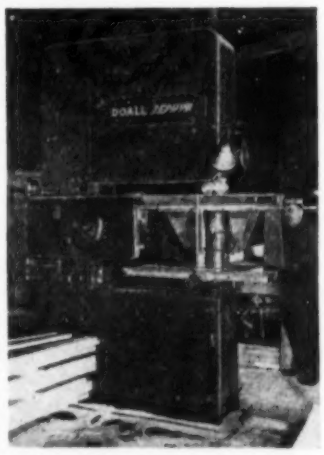
BANDSAW ATTACHMENT

Converting Zephyr model No. 36 bandsaw for resaw and ripping operations, this bandsaw attachment bolts directly onto column of unit and can be swiveled out of way when not in use. Attachment is constructed for positive feeding and variable speed drive to provide operator with complete control over rate of feed ranging from 0 to 30 feet per minute.



Resaw unit accommodates material up to 12 x 12 inches and is electrically driven on four feed rollers. Its accuracy is such that variation from absolute squareness in cuts at full capacity of machine is less than 0.002-inch. Runout is also less than 0.002-inch. Idler rollers are kept in position against work by spring tension. Indexing of cut is managed by means of calibrated wheel. Made by DoALL Co., 254 N. Laurel Ave., Des Plaines, Ill.

Refillable Draftsman's Pencil

Has Unique Clutch to Protect Leads from Breakage

Instead of the usual metal tubular grip which scores leads and causes breakage, this new Bruning Draftsman's Refillable Pencil No. 3583 has a new type clutch which holds the lead firmly in a non-slip rubber grip. There is no nicking or scoring to weaken leads when clutch is tightened. This pencil holds leads from .079" to .070" including degrees HB to 9H of any popular drafting type lead. Long barrel permits use of full-length leads. Adjustable cap of pencil turns to show exact grade of lead used by owner. Other features include light weight—proper balance—"finger comfort" knurled grip. Professional in appearance—unquestionably a precision tool—this new pencil sells for only $1.00. For full information, write Charles Bruning Company, Inc., 4730-34 Montrose Avenue, Chicago 41, Illinois.

BUSS FUSETRONS

will provide

BURNOUT PROTECTION

for coils — solenoids — transformers

Simply—Inexpensively—and eliminate costly and troublesome replacement jobs

Here's Actual Proof—

Says the Electrical Engineer of a large midwest company. (Name on request.)

"We were having trouble with solenoid coils that operate remotely controlled DC circuit-breakers. For mechanical reasons the breakers sometimes failed to close and when they did the solenoid coil burned out.

"New coils cost $36.00 and in addition we had the trouble and expense of having a man manually operate the breaker 24 hours a day until the coil was replaced.

"We tried small circuit-breakers to protect the coils but they failed. A size small enough to protect did not have enough time-lag to let the coil operate.

"Then we installed 4 ampere 600 volt Fusetrons. They completely solved our problem. The solenoid coils no longer burn out."

Solve Shutdown Problems—with Fusetrons

To safeguard Coils, Solenoids, Transformers, etc., the protective device must have a time-lag long enough to hold normal starting currents or harmless overloads. Yet it must open to protect, should something go wrong.

Fusetrons, because they combine a fuse with a thermal cutout, can give this kind of protection and prevent burnout of such apparatus.

HERE'S ALL YOU NEED TO PROTECT COILS, SOLENOIDS AND TRANSFORMERS

A Fusetron of proper size, plus a fuse block— or a BUSS fuse-holder.

On voltages up to 125, the same accurate, dependable protection can be provided with

a proper size plug Fusetron or a Fustat, plus a fuse block.

Why risk a costly and troublesome repair or replacement job—and take a chance crippling plant or building operations, when Fusetron protection is so simple and inexpensive?

Fusetrons Do Everything Fuses Do, and More—They can . . .

★ Provide simplest way to stop burnouts from single phasing. ★ Entirely wipe out needless blows caused by motor starting currents or other harmless overloads. ★ Give thermal protection to panelboards and switches. ★ Prevent needless blows caused by heating in panels and switches. ★ Permit use of larger motor or adding more motors on circuit without installing larger switch or panel. ★ On new installations, proper size switches and panels can be used instead of oversize. ★ Protect motors against burnout. ★ Give double burnout protection to large motors. ★ Make burnout protection of SMALL motors simple and inexpensive.

Get All the Facts—Get Better Protection

Don't risk avoidable losses. Write for full information on Fusetrons.

WALL DISPLAY BOARDS

Instructions to plant employees, safety slogans or current plant advertising programs can be introduced and continuously brought to the attention of workers with this easily mounted Minit board. Boards measure 17-1/2 by 24 inches and are covered with clear Plastacele window to keep message clean and in place. Messages are changed by grasping mounting board and Plastacele window between thumb and first two fingers; pushing up to clear lower ledge; pulling down and out; and message is removed and new one inserted.

Boards are made of steel and enameled green. They extend only 3/16-inch from wall. Only a few minutes are required to mount single display unit. Made by **Boyer-Campbell Co.**, Safety Div., 6540 St. Antoine St., Detroit 2, Mich.

What's a "Veeder-Reading" . . . and how does it tell your future ?

"Veeder-Reading" is a standard term originated by one of the leading electrical manufacturers to designate the figures noted down, at stated intervals, from the face of a Veeder-Root Counting Device installed on a production machine or process.

And Every "Veeder-Reading" is a Direct Reading that tells the story without need of translation . . . tells in bold figures the exact number of turns, strokes, pieces, trips, motions or other performance-units completed by a machine during a minute, hour, shift or other production-period.

OHIO "Extra Strength" MAGNETS

INCREASE

PRODUCTION

Rugged, dependable Ohio "Extra Strength" Magnets are being used to UP production and REDUCE overhead costs in many industries. Truly versatile, they load and unload ferrous metals from trucks, freight cars and ships' holds; sweep roads clean of sharp bits of tire-destroying scrap metal; efficiently handle iron and steel in mills and factories; and extract trouble-causing metal from such materials as coal, ore, food and grain.

Ohio "Extra Strength" Magnets incorporate special design features that give power *plus* — greater dependability. It will pay you to investigate the tremendous production economies made possible by Ohio Magnets. Ohio engineers, experts in the solution of metal handling problems, are always available to give you sound engineering recommendations.

Match the print to the job!

With Ozalid, 10 different types of prints can be made from any drawing!

So consider the job—and make the type of print best fitted for it! 1. Black-line; 2. Blue-line; 3. Red-line; 4. Opaque Cloth; 5. Sepia-line Cloth; 6. Sepia-line Intermediate; 7. Transblack Intermediate; 8. Transparent Foil; 9. Ozaplastic; 10. Dryphoto.

One Job: To combine the details of three separate tracings *on one* print.

The Ozalid Print for the Job: OZALID TRANSPARENT FOIL. Each tracing is reproduced in seconds on a separate piece of Ozalid Foil.

Then the three transparent foils are overlaid in register or the desired type of Ozalid sensitized material . . . and fed into the Ozalid machine. After printing, the foils are returned . . . and seconds later the dry developed Ozalid print emerges —a perfect composite, ready for immediate use.

• The above is just one of hundreds of jobs you can do with Ozalid—faster, more economically.

See the 10 types of prints you can make in seconds . . . and learn complete Ozalid story.

Write for free booklet No. 209.

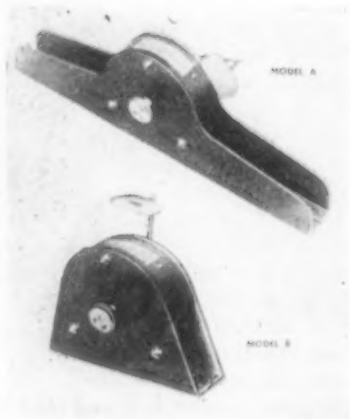
VERNIER ANGLE GAGE



Designed for measuring angles and inclinations, improved Clinometer vernier angle gage has aluminum housing, special window for reading and increased stability. Instrument is used on lathes, drill presses, shapers, gear hobbers and other machine tools and for test setups in inspection room. Gage employs free swinging drum graduated 360 degrees and mounted on ball bearings. When device is applied to inclined surface, drum swings to position bringing center of gravity under center line. Degrees of inclination can be read directly from drum. Minutes of arc are indicated by separate vernier scale. Accuracy is to 1 minute of arc. Hand knob brake locks drum in position when desired. This makes it possible to preserve reading when gage has been removed from work. Magnifying glass can be attached to facilitate reading dial. Made by **Engis Equipment Co.,** 431 S. Dearborn St., Chicago 5, Ill.

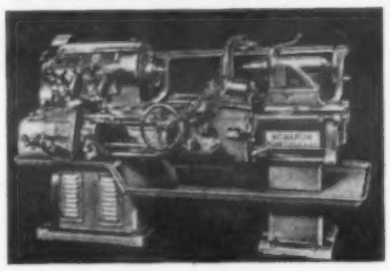
CONTOUR CUTTING DEVICE

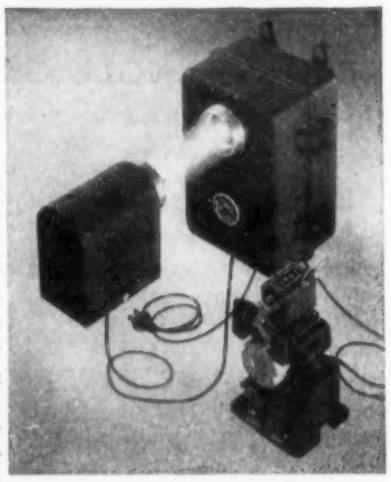


Adaptable for use on any new 14, 16, 18 or 20-inch Monarch Toolmaker or engine lathe, Air-Tracer contour cutting attachment (*Item NED-2248, April '46*) will produce work pieces with contours to match those of master template within limit of 0.001-inch. Device combines tracing unit with hydraulically operated power circuit and can be used for any increasing contour or multiple diameter work. Mandrels, punches, dies, spinning chucks, valves, metering pins, nozzles, impellers, molds and step shafts are typical examples of work for which attachment is recommended. Thin metal templates can be used because air pressure of tracer against template is only a few ounces.

In operation, template is scanned by spring loaded tracer working on air gaging principle. Air loading pressure established controls operation of tool slide through hydraulic relay valve. Change in template shape increases or decreases air loading pressure and movement is amplified into hydraulic relay in ratio of 1 to 100. Actuation of relay valve is by flexible metal bellows. Lathe carriage is moved by usual power drive or handwheel. Because tool slide is set at 45-degree angle, tool follows path relative to work which is the resultant of movement of carriage and hydraulically operated tool slide. Position of template support is adjustable along the rail and micrometer adjusting screw is provided to permit critical longitudinal adjustment of template. Made by **Monarch Machine Tool Co.**, Oak St., Sidney, O.

▲ Mention Item NED-880 when writing ▲

PHOTOELECTRIC COUNTER



Completely packaged and easily installed, type P1 general purpose photoelectric counter will count small or freshly painted products, hot objects, leather goods, glass units, tubes and bottles, as well as output of punch presses and screw machines. Unit will count up to 600 objects per minute and will count up to total of 99,999. It is returned to 0 by reset knob. One or more counters, each containing counter face and reset knob, can be placed at any location along loading chute or conveyor and wired to main control. Remote control is thus effected. Selective counting by height or length can also be accommodated.

Counter unit requires no wiring other than line cord with male plug connection which draws power from any standard lighting outlet. This supplies power for light source and electric counter which in turn have cables and plugs for connection to control. Entire combination of equipment can be installed quickly and without need of electrician. Made by **Photoswitch, Inc.**, 77-89 Broadway, Cambridge 42, Mass.

With These Versatile Cooley Furnaces

- One Model to operate at 2000° F.
- One Model, 2 sizes, to operate at 1850° F.
- Use for both hardening and tempering.
- Simple and economical to operate.
- Positive Control over high and low heats.
- Uniform temperatures assure results.

Profitable Uses for Cooley Furnaces

1. Hardening, drawing and tempering small batches.
2. Quickly normalizing and annealing small parts.
3. Convenient for high speed pre-heating.
4. Expedites emergency repairs.
5. Predetermining production heat treating technique.
6. HARDEN and DRAW in the SAME FURNACE with assured temperature control at either heat.

Cooley furnaces are easily installed, quiet in operation, and create no fumes or odors.

THREE SIZES—MH-3, MH-4—1850°F.; MH-5—2000°F.

Type	Chamber Capacity	Amps 115 V	Watts	Amps 230 V	Price
MH-3	8"W 6"H 14"L	29.6	3400	14.8	$146.00
MH-4	10"W 6"H 18"L	—	4500	19.6	$222.50
MH-5	8"W 6"H 14"L	—	4800	20.9	$340.00

All furnaces complete with Hearth Plate.

AUTOMATIC CONTROL—Indicating Controlling Pyrometer—Thermo-couple and lead wire—approximately $150.00.

TWO NEW EXTRA FEATURES AVAILABLE

1. Counter weighted Vertical Lift Door supplied at $20.00 additional on MH-3, MH-4, standard with MH-5 Model. 2. For Heavy Gauge Steel Stand, with shelf, add $35.00 to regular price.

USE IT FOR FASTER, SMOOTHER WORK ON STEEL, IRON, BRASS, BRONZE, WOOD, PLASTICS, GLASS AND OTHER MATERIALS.

GRINDS
MILLS
DEBURRS
ENGRAVES
POLISHES
FINISHES

Speed with power with precision—that's the new PRECISE 40. Surpasses our own PRECISE 35 which outworked every tool in the field. In strong, light plastic case, PRECISE 40 weighs only 40 oz.—packs a record 1/5 H.P. New type quill mounts precision collet chuck or grinding wheel arbors of various sizes; push-button spindle lock for quick tool change. 90% greater cooling; four oversize ball bearings. Quickly lubricated by pressure gun through ball-valve inlets. Tool mounts in vise, lathe, stand, or milling machine or can be used with PRECISE accessories for special applications. Guaranteed shockproof without ground wire.

HAND LIFT TRUCK

Both pallet and platform models of this Power Jacklift electrically operated hand lift truck are available. Trucks feature vertical handle operation and electric braking. Electric Master Drive that powers unit is easily replaceable. Steering arc for handle assembly is 200 degrees. Deadman handle provides for smooth immediate stopping the moment handle is released. Gear drive and wheels are mounted on ball bearings, totally enclosed and packed in grease for dependable operation. Trucks are available in several lengths and platform truck is available in both wide and narrow models. Made by **Lewis-Shepard Products, Inc.**, 302 Walnut St., Watertown 72, Mass.

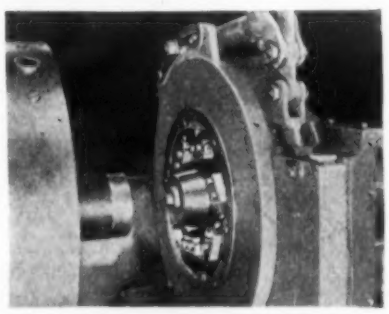
RAILROAD CAR LOCKING TOOL

Designed for closing and locking latch type hopper bottom railroad cars, this Speed-Up Safety Tool is easy to use, does job in practical manner and minimizes possible personal injury. Tool is made from round bar steel. Link and hook are located on one end and L-shape is forged on other end. Two notches provided in L-shaped end prevent slipping. Price of tool is $12.50. Made by **Industrial Products Co.**, 2807 N. Fourth St., Philadelphia 33, Pa.

▲ Mention Item NED-889 when writing ▲

PIPE CENTERING PILOT

Designed for use on company's 8-5/8 and 13-3/8-inch receding chaser pipe threading and cutting off machines, this centering pilot centers pipe true with die head to assure concentric threads and maximum threading speed. Chatter is eliminated and chasers can be set farther back of center to increase clearance back of cutting head. This setting of chasers results in increased tool life and improved thread finish.



Spring pilot is bolted onto rear of cross rail. Since this necessitates removal of cutting off slides, machine is limited to threading only when equipped with pilot. When pilot is changed for different diameters of pipe, it is necessary to remove only one screw in center of pilot. In operation, pilot is forced forward by spring and engages bore of pipe prior to pipe advancing to chasers. The 10-degree angle of pilot permits its use on different wall thicknesses of pipe. Made by **Landis Machine Co.**, 55 Fifth St., Waynesboro, Pa.

RULE OUT Wasted time

Too narrow a face on a grinding wheel can mean too much time on the job. Why use a wheel with a 1" face, for instance, when one with a width of 1½" to 2" can increase surface contact 25 to 50%? This time saving efficiency is yours in the complete line of Simonds Abrasive wheels. Whether for rough snagging or for precision finishing there is a Simonds wheel to measure up to your most exacting requirements for maximum production with speed and efficiency. A copy of the Simonds Abrasive Data Book is available to guide your selection. Write for yours today.

For assistance in requisitioning consult Simonds Abrasive distributors located in all principal cities.

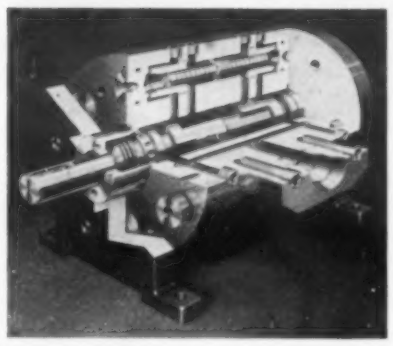
HYDRAULIC BOOSTER



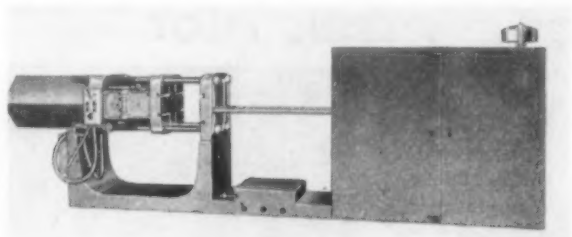
Capable of supplying pressure of up to 7500 pounds per square inch, this Hydro-Power oil hydraulic pressure booster is multiplunger intensifier unit that multiplies circuit pressure by as much as three times. Two available boosters have 35 and 100-gallon per minute input and each size can be furnished in pressure ranges of 2¼ to 1 and 3 to 1. Volumetric output is in inverse proportion to pressure ratio.

Units operate without appreciable increase in system horsepower. They can be installed easily in new or old hydraulic circuits and where higher pressures are needed constantly or intermittently. Body of booster houses entire assembly and provides means of porting both suction and discharge. Flanged connections provide easy means for connecting unit to system. Booster unit consists of cylinder block having nest of six parallel bores, each fitted with reciprocating, double acting piston. Central rotating valve member connects pistons with source of pressure fluid. As valve rotates, oil connections are made successively to each piston, alternating from one end to the other to give uninterrupted pressure flow. Made by **Hydro-Power, Inc.**, Belmont & Sheridan Aves., Springfield, O.

▲ Mention Item NED-898 when writing ▲

INJECTION CASTING MACHINE

High speed cold chamber injection type model HD103 molding machine is capable of casting up to 2.6 pounds of aluminum or a proportionate volume of other base metal alloys



at maximum production rate of 500 shots or cycles per hour. Machine is comparatively small. It is equipped with center gate and provision is made for conversion to hot chamber for casting lead, zinc and tin base alloys. Engineering specifications provide for normal die dimensions of 13½ inches vertical by 23 inches horizontal with a dimension of 10 inches between dies in open position.

Injection piston has diameter of 4 inches with a stroke of 13 inches. Operating under 1000 pounds per square inch oil hydraulic pressure, a pressure of 5000 pounds per square inch is applied to molten metal injected into die cavity. Controls are semiautomatic with automatic time and cycle adjustments of die opening and closing. Foot switch controls injection operation. Heating furnaces can be fired by either gas or oil to suit requirements. Machine is actuated by 5-horsepower electric motor and by Vickers hydraulic pump. Made by **H. L. Harvill Mfg. Co.**, Corona, Calif.

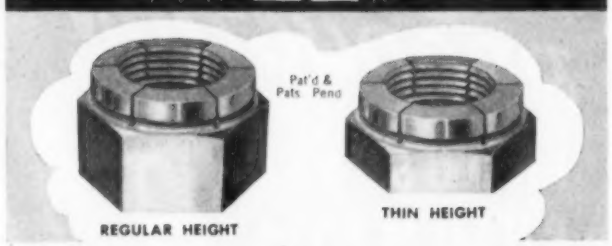
FLEXLOC



SELF-LOCKING NUTS

CAN YOU BE SURE THAT A PLAIN NUT WON'T SLYLY UNWIND ITSELF? If not, then what you need is the All-metal, One-piece "Flexloc," which is a self-Locking Nut that won't budge, except when a wrench is used.

"Flexloc" packs maximum usefulness in minimum space because it is rugged, locked, compact—and is therefore, becoming increasingly popular and this applies alike to U.S.S. and S.A.E. thread series. Every thread—including the locking threads—takes its share of the load.

Covers a wide range of tolerances—from low #1 to high #3. Can be used over and over again without losing much of its locking ability.

Being a "stop" nut, it stays locked in any position on a threaded member.

"Flexloc" Thin Nuts are especially popular, because their tensile is so high.

Sizes from # 6 to 1" in diameter—millions in use!

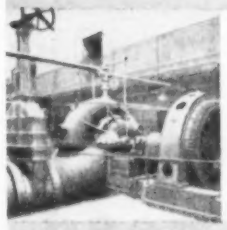
INDUSTRY BANS RUST AND CORROSION *with* EVERLASTING FASTENINGS

Few industries can escape the destructive effects of rust and corrosion but *all* industries can reduce their costly ravages in maintenance and breakdown.

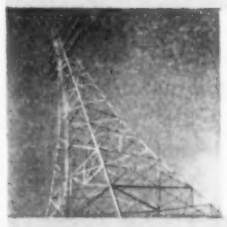
Here are five industrial applications where Harper's EVERLASTING FASTENINGS have licked rust and corrosion.

MONEL STOPS CORROSIVE CHEMICALS Problems in salt production have been solved by using Monel bolts. In mining, treating and handling of many chemicals, nonferrous alloys are the answer to efficient operation.



BRASS GUARDS WATER SYSTEMS In valves and pumps that compose the heart of water works, Brass fastenings help in eliminating the most common cause of replacement—rust.

STAINLESS STEEL SOLVES OIL PROBLEMS Acids and gases at high temperatures attack metal but Stainless Steel alloys cut refinery replacements to a minimum, assure years of continued operation.



UTILITIES CHOOSE SILICON BRONZE Weather is the bug-a-boo in power lines and other utility applications. Silicon Bronze Bolts reduce season "cracking" and maintenance costs.

NAVAL BRONZE WINS ON THE SEA Marine applications demand high strength plus resistance to salt air and water. Naval Bronze fastenings have proved their dependability in marine diesels and ship fittings.

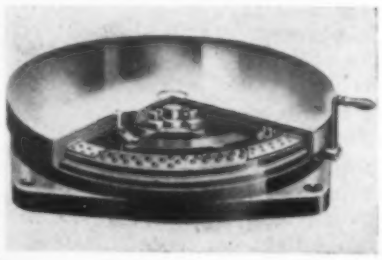
INDEXING TABLE



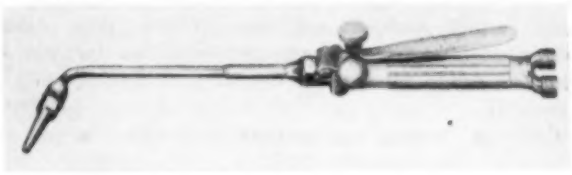
Indexed manually and located automatically, Robbins index table provides for accurate work positioning in wide variety of production operations. To index, crank handle is turned to horizontal position, thus disengaging large diameter locking pin. As table is indexed, handle is released and table locked in next position automatically. Number and location of index positions can be determined to suit any application. Safety stop permits indexing in one direction only.

Table is supported by large ball bearing which eliminates out-of-parallel conditions resulting from vertical thrust from cutting tools or heavy parts located off center on table. All wearing parts are hardened and ground for maximum life and are concealed from dirt, chips and abrasives. Made by Robbins Engineering Co., 324 Midland Ave., Detroit 3, Mich.

▲ Mention Item NED-906 when writing ▲

WELDING TORCH

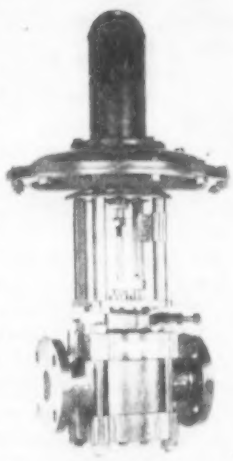
Incorporation of full handle length control lever which permits maximum operating range and easy handling is feature of model W-46 Weldit welding torch. Only finger tip



pressure is required to shut off or release gas. This torch also has built-in automatic Gasaver for conservation of welding gas. Made by Weldit, Inc., 990 Oakman Blvd., Detroit 6, Mich.

▲ Mention Item NED-907 when writing ▲

DIAPHRAGM MOTOR VALVE



Intended principally for chemical service applications, Valvrator line of diaphragm motor valves is available in several chemically resistant materials. Valves are of dished bonnet construction with flush seated bodies and through bolts. Since no bonnet flanges are included in body construction, compactness, minimum weight, simplified cleanout characteristics and fabrication of unit from wide range of materials are possible. Body materials from which valves can be made include iron, bronze, stainless steel, carbon steel, hard lead, Haveg, hard rubber, Monel, nickel, Hastelloy and porcelain. Sizes from 1/4 to 1 inch screwed and from 1 to 3 inches flanged, all of 150 pounds per square inch construction, are available. Made by Fischer & Porter Co., Dept. 1D-7, 928 County Line Rd., Hatboro, Pa.

SURFACE GRINDER

Featuring manual controls, illustrated model GH surface grinder is especially applicable to operations requiring close tolerances. Grinder features smooth easy table action. Unit has deep V-ways between saddle and base and one flat and one V-way between table and saddle. Cartridge type direct drive spindle is included as standard equipment. This spindle has precision ball bearings throughout with automatic takeup for wear.

Castings used in grinder are of nickel alloy for long wearing quality. Grinder has one-piece base and column support construction. Precision elevating screw and cross feed screw operate through 4-inch bronze nuts to minimize wear. Hand wheel for spindle elevating screw is graduated in 0.0005-inch increments with vernier adjustment to 0.0001-inch. Hand wheel for cross feed is graduated in 0.001-inch increments. Working area of table is 6½ x 19¾ inches with maximum working height of 12 inches using standard 7 x ½ x 1¼-inch grinding wheel. Electromagnetic chucks, alternating and direct current rectifiers and demagnetizers, dust collectors and wheel dressing diamonds are available for use with machine. Made by DoALL Co., 254 N. Laurel Ave., Des Plaines, Ill.

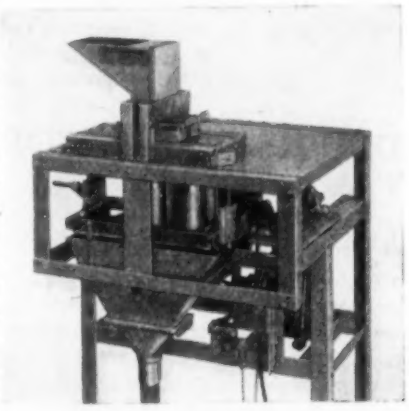
VOLUMETRIC FILLING MACHINE



Free flowing dry products can be packaged in the Rapp-Id-Filler volumetric filling machine at rate of from 80 to 120 units per minute. Containers ranging in size from few ounces to several pounds can be filled with rice, beans, peas, nutmeats, hard candies, grocery staples and similar products.

Machine employs telescoping type filling cups which have adjustable capacities from 22 to 33 cubic inches on smallest cup to 29 and 42 cubic inches on largest cup. Two models are available, CV-4 having four filling cups and CV-6 having six cups. Operation of models is identical. During operating cycle, two cups are filled. They then move over and empty while other two cups are being filled. This cycle is continuous. Slides are provided for cutting off flow of material into one or more cups. Cups can be emptied into common discharge hopper or into individual discharge hoppers depending on size of package and production desired. Made by Triangle Package Machinery Co., 917 N. Spaulding Ave., Chicago 51, Ill.

HUPPERT
PORTABLE PYROMETER

New in design, new in convenience, new in service—the Huppert Portable Pyrometer has departed from the conventional portable pyrometer specifications to fully meet the needs of today. This novel departure provides complete protection to face of instrument in all resting positions and perfect reading of the scale without neck stretching. Accuracy to 2% of scale. Duo range scale—0 to 500° and 0 to 1000° F., or 0 to 750° and 0 to 1500° F., or 0 to 1000° and 0 to 2000° F., or equivalent °C. Special ranges to order. Overall length of instrument, 11". Cast aluminum body sealed against dust and fumes. Durable handle. Rubber legs. Also available as surface type.

NONREUSABLE LABELS

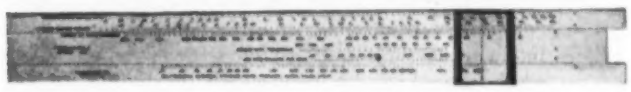
Designed for trade marks, underwriter's approval and similar factory applied data, self-destroying Kum-Kleen labels can be applied to metal, plastic, wood, varnish, glass or cellophane. Self-destroying feature is effected by die cutting label so that it can be removed only in segments and cannot be used again. Die marks are impressed in such manner that they are virtually invisible and in no way affect design on label.

Labels adhere without moisture to any smooth, clean surface, will not pop or curl despite intense heat, cold or humidity. Labels will peel off easily without leaving mark. Made by **Avery Adhesive Label Corp.**, 36 W. Union St., Pasadena 1, Calif.

▲ Mention Item NED-926 when writing ▲

PRODUCTION SLIDE RULE

Rapid calculation of an operator's daily production requirements and results can be computed on this Productirule. Unit will compute standard hours of work produced, productivity

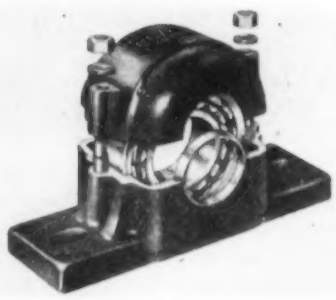


percentage, wage incentive earnings, day work and base rate earnings, production units required to break even with standard, production units required to earn any desired bonus and standard labor costs per 100 units.

Scales are of sufficient range to cover nearly all operations and can be applied where allowable standard times are expressed either in minutes per unit or hours per hundred units. Instructions illustrated by examples accompany each rule. Price of rule is $2. Made by **Productirule Co.**, Strawberry Hill, Irvington, N. Y.

▲ Mention Item NED-927 when writing ▲

SPLIT PILLOW BLOCK



Quick and easy installation, removal or replacement of power transmission shafts without misalignment can be effected with Shafer split pillow blocks. Positive alignment dowel bolts assure alignment of cap, bearing and base. No separate dowels are needed. Base allows for two or four-bolt mounting. Large lubricant reservoir, served by single conveniently located filler hole and single drain hole, provides cool lubrication.

Blocks are equipped with series DE-22000 self-aligning bearings with two roller assemblies, one-piece outer race and spherical inner race. Units are universally adaptable to line shafting or machine installation in all industrial equipment and are readily interchangeable with all other makes of split pillow blocks. Made by **Shafer Bearing Corp.**, 1412 W. Washington St., Chicago 7, Ill.

THE WIRE INSULATION THAT WILL NOT BURN

A CLASS "C" INSULATION—INORGANIC-CERAMIC—
APPROXIMATELY ¼ MIL THICK
PERMITS CONTINUOUS OPERATION AT 200° C.

Sprague CEROC 200 is an inorganic, non-inflammable ceramic wire coating supplied in a preferred thickness of only ¼ mil and holding vast opportunities for smaller size and lighter weight with greatly increased power for a wide variety of electrical equipment. Midget windings can do man-size jobs—with safe, conservative operation up to 200°C. Space factor is higher than that of any other wire insulation and, CEROC 200 can readily be wound to meet most requirements.

MIDGET-SIZE WINDINGS DO MAN-SIZE JOBS!

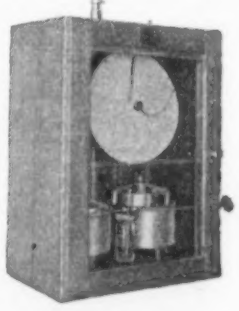
The World Over —wherever there is gas



ARCCO-ANUBIS GAS GRAVITOMETERS

• Once calibrated and properly installed the Arcco-Anubis Gas Gravitometer requires no further attention. Hundreds are in use in pipelines and refineries of major companies. • This precision specific gravity instrument is constructed without electric motors, pressure regulating valves or other complex arrangements. The instrument is practically frictionless and the gas flows through it continuously, thus minute changes in specific gravity are recorded at once as they occur. As shown through years of use, Arcco-Anubis Gas Gravitometers remain accurate and highly responsive even under severe conditions of service.

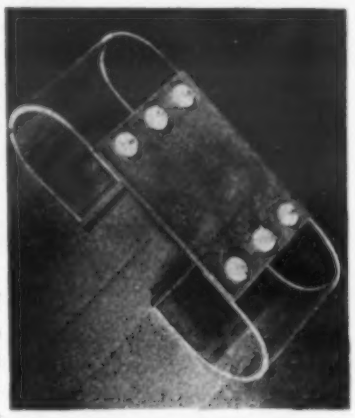
PLASTIC RIVETS



Usable for fastening of light metals, leather, cardboard, rubber, upholstery and plastic material, these plastic rivets are made of Plexiglas transparent acrylic plastic and can be clinched without shock. Both solid and hollow shank rivets are available. Heat expansion method of insertion allows rivets to be used as blind fasteners where only one side of assembly is accessible. Because rivets will not rust or corrode, they are recommended for use in radio or high frequency apparatus or in food containers where metal cannot be used.

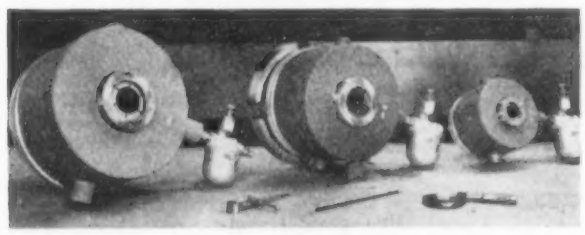
When used on fragile materials, rivets are heated and expanded with air pressure of spring loaded mechanism. After forming bond, exposed parts of rivet can be turned into decorative effect by further heat application to expand plastic into variety of shapes and forms. Rivets are available in wide variety of colors ranging from light tints to deep tones, thus permitting manufacturers to match product colors.

Two models of combined air and heater guns are available for applying rivets in bonding process. One type has completely automatic features and provisions for magazine loading device while second model is manually operated requiring individual insertion of rivets which are heated and expanded within machine. Plastic rivets made by **Douglas Aircraft Co.**, Santa Monica, Calif.

▲ Mention Item NED-935 when writing ▲

AIR OPERATED CHUCKS

Two larger sizes have been added to standard line of precision air operated chucks. No. 501AT chuck is available in 1/32-inch diameter increments in 1⅝ to 1, 31/32 to ½ and 15/32 to



¼-inch sizes and in ⅛-inch steps in 1⅜ to ¾-inch hexagon size. Model No. 601-AT is available in 1/32-inch diameter increments in 2⅛ to 1½, 1 15/32 to 1 and 31/32 to 11/16-inch sizes as well as in ⅛-inch steps in 1⅞ to 1⅜-inch size for hexagon stock. Chucks feature collapsibility range of 1/32-inch, replacing seven standard single-purpose collets. Uniform, vise-like grip along entire length of collet permits holding glass, gold and ceramic tubing, and ferrous and nonferrous metals for second operations. Minimum breakage of tools and parts on drilling, buffing, polishing, honing and other operations is claimed. Other features include increased feeds and speeds, reduced set-up time and reduction of rejected parts. Made by Erickson Tools Div., **Erickson Steel Co.**, 2309 Hamilton Ave., Cleveland 14, O.

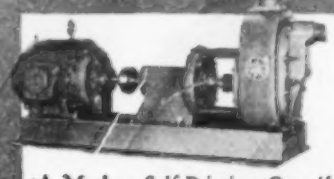
It's what is NOT inside that makes a MARLOW PUMP more efficient!



A Marlow Self-Priming Centrifugal Pump has no ports, by-passes or other auxiliary priming devices that reduce pumping efficiency. Priming is positive and automatic even on high suction lifts.

With the exclusive Marlow diffuser method of self-priming there is no recirculation or wasted motion. A Marlow has no parts which require adjustment or manipulation. Practically no operating attention is needed.

- Pumps wide variety of liquids; clear, gritty, heavy, volatile.
- Reliable for continuous or intermittent service; primes itself whenever necessary.
- Strong, long-life construction that helps assure dependable, trouble-free performance.
- 1½ to 10-inch sizes. 25 to 3500 gallons per minute.

Send for interesting literature. Marlow Pumps, 590 Greenwood Avenue, Ridgewood, N. J.

CHERRY BLIND RIVETING

Speed **unequalled by any other fastening technique.**

Security **equalled only by conventional riveting.**

Speed—No hammering or bucking. Installation of a Cherry Blind Rivet is a simple one-hand operation in which the rivet is installed with a *controlled pull* from one side of the work only.

Tight, Strong Joints because of dynamic expansion of rivet shank during installation (greater shank expansion than any other blind fastener). Powerful controlled pull of rivet gun draws stem into rivet shank, *forcibly expanding* rivet to fill hole *tightly*. Strength and vibration-resistance comparable to conventional rivets. Don't work loose like nuts and screws.

CHERRY RIVETS, THEIR MANUFACTURE & APPLICATION ARE COVERED BY U. S. PATENTS ISSUED & PENDING

Cherry Rivet *Company* LOS ANGELES 13, CALIFORNIA

Get this illustrated manual. Write Dept. B-113, Cherry Rivet Co., 231 Winston St., Los Angeles 13, Cal.

MOTORIZED HAND TRUCK

Employing either electric lift or foot lift, 1947 models of motorized hand truck operate from standard 11-plate storage batteries. In electric lift model, electric lift pump and motor use minimum of current, said to be less than 10 per cent of battery capacity in normal day's operation. Batteries and chargers of Transporters, Transtractor push-pull unit and Transtacker high-lift stacking unit are interchangeable.

Controls include forward and reverse, speed, lift, steering and brake and are so arranged that they can be manipulated by one hand and operated simultaneously. Time required to lift and move average load to maximum height is less than 5 seconds. Lift components are adequately protected from damage but are readily accessible for maintenance.

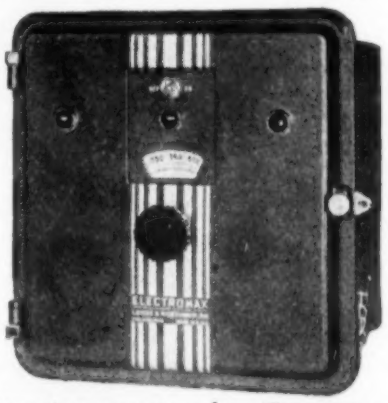
Both electric lift and foot lift types have double position brake which can be applied by either raising or lowering guide handle. Combination of brake and one-hand controls with electric lift enables operator to guide Transporter into skid or pallet, brake truck, lift load and reverse direction in single motion without stopping.

Both electric and foot lift types are available having 4000 and 6000-pound load capacities in platform models and 4000-pound capacity in pallet model. Made by **Automatic Transportation Co.,** 149 W. 87th St., Chicago 20, Ill.

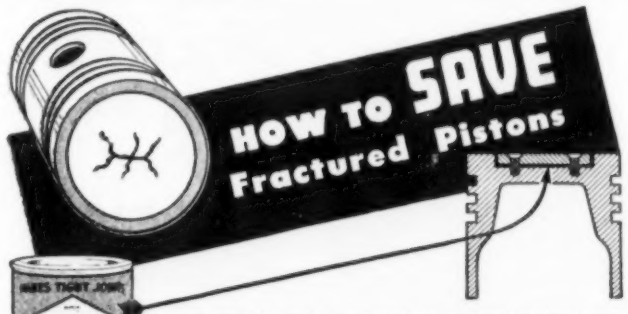
▲ Mention Item NED-944 when writing ▲

TEMPERATURE CONTROLLER

Developed for temperature control of ovens, stills, baths, presses and coolants where indicating and recording features are not required, Electromax temperature controller is low priced unit which signals and controls only. Temperature readings can be taken manually with it at any time. Instrument employs Wheatstone bridge circuit with vacuum tube amplifier and detector. Tubes are standard types which require no matching or balancing. Unit is operated from standard alternating current outlet. Temperature sensitive elements used are Thermohm resistance thermometer bulbs. Length of lead wires does not affect calibration of instrument and location of Thermohms can be changed as desired. Standard ranges are 0 to 250 F and 0 to 1000 F or corresponding ranges of 0 to 150 C and 0 to 550 C. Made by **Leeds & Northrup Co.,** 4934 Stenton Ave., Philadelphia 44, Pa.



▲ Mention Item NED-945 when writing ▲



A radial crack developed in a Diesel piston head. This simple, inexpensive repair put the piston back in service.

Enough metal was removed to hold a carefully fitted metal plug. See diagram. This plug and the recess were thoroughly coated with Smooth-On No. 3 Iron Cement. Flat-head screws, also seated with Smooth-On No. 3, secured the plug in place. The cement, when set, became as hard as the piston metal, sealing the crack and gripping the plug tightly.

Smooth-On No. 3 comes in paste form, ready to use. Makes tight threaded or flanged joints. Seals rivets and seams. Withstands high temperatures and pressures, water, steam, gas, air. Order it in 1-, 5- or 25-lb. size from your supply house. If they haven't it, write us.

FREE Repair Handbook

Clear directions for many practical, tested repairs on plant and shop equipment. 40 pages. 170 diagrams. Pocket size. Mail a postcard for YOUR free copy.

NEW

Another BRYANT Postwar Development

Universal DIAMETER GAGE

The New Bryant Universal Diameter Gage offers faster, simpler and highly accurate inspection of internal or external plain diameters from ⅜ inches to 4 inches—in fact, operation is so simple that after the gage has been set to a master ring, the operator has merely to place a part on the contacts and check accuracy to the nearest .00002 inch on the dial indicator.

Functional design and sound construction result in many labor saving features and assure long lived accuracy in the new gage. The serrated steel work table is adjustable to accommodate parts up to 1½ inches in depth. Diameter measurement is accomplished with three precision-ground, hardened-steel contact points. Two are movable and travel in unison to facilitate setting for different diameters. The third is a stationary sensitive contact which may be operated by a finger-tip control lever when necessary. The points are designed to contact the work at 90 degrees and automatically center it regardless of diameter. To further insure accurate readings, a vibrator actuates the movable mechanism and the dial indicator to disclose very minute variations in the part being checked—this eliminates "feel" for fit.

The new Bryant Universal Diameter Gage simplifies and speeds inspection of varying sized plain diameters—cuts quality control costs to a new low—it will pay you to write for complete details.

Also Bench Model Thread Gages, Adjustable Thread Gages, Squareness of Face Gages and Portable Thread Gages.

Please send me Catalog No. G3 which gives complete details on the Bryant Thread Gages.

▲ Mention Item NED-954 when writing ▲

CARBON MONOXIDE ALARM

Operating continuously and providing both visible and audible signals, this carbon monoxide alarm guards against dangerous concentrations of carbon monoxide in air near blast furnaces, in steel mills, chemical plants, public garages and other locations. Predetermined settings can be made for concentrations as low as 0.02-per cent (2 parts per 10,000), a concentration at which a few hours exposure would be required to produce first symptoms of poisoning.

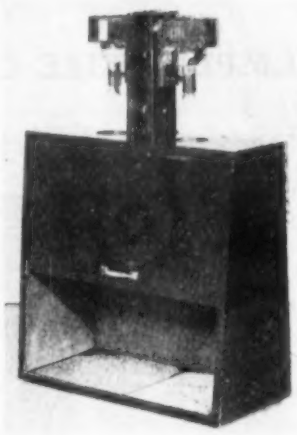
Alarm unit draws continuous sample of surrounding air and forces it over catalyst which oxidizes all carbon monoxide to carbon dioxide. Heat of reaction is measured by thermocouples and indicated on contacting meter dial in terms of concentration. When concentration of carbon monoxide reaches predetermined meter setting, alarm horn sounds and red light jewel is illuminated. Both signals continue to operate until instrument is reset manually.

Instrument is self-contained in weatherproof case and requires only connection to 110-volt current source. Made by Mine Safety Appliances Co., 220 N. Braddock Ave., Pittsburgh 8, Pa.

▲ Mention Item NED-955 when writing ▲

FINISH INSPECTION UNIT

Machined finishes are controlled easily with this model D-30 portable Faxfilm projection unit. Instrument provides quick accurate comparison of production finish with standard finish and can be used on curved and conical shapes and inside or outside diameters as well as on flat surfaces.



In operation, plastic replica of surface is made in less than a minute and projected in microfilm projector to produce three-dimensional image of surface at from 10 to 200-diameter magnification. Two microfilm projectors mounted at top of case can produce images of standard finish and of production finish side by side at 30-diameter magnification for comparison. Wollensak 1-inch f:2.46 lenses provide definition of minute surface irregularities to show differences between surfaces. Rheostats for each projector equalize intensity of their light for accuracy in comparison.

Higher magnification is obtained by turning projectors so that they project horizontally on wall or screen. Entire inspection unit operates on 110-120 volt alternating or direct current. Overall weight is 27 pounds and space required is only 2 square feet. Made by Faxfilm Co., Room 556, 1220 W. Sixth St., Cleveland 13, O.

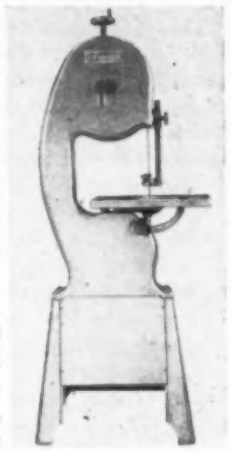
BAND SAW

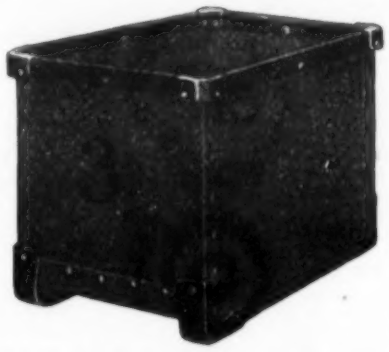


Originally designed for work on wood and plastics, model 140 heavy duty general purpose band saw also can be used for metals. Frame and guard are one-piece casting. Vertical cutting clearance is 10 inches and horizontal clearance is 13¾ inches. Wheels are balanced and ball bearing mounted. Blade is installed at back of saw unit to assure maximum operator protection.

Tilting table is made of cast iron. It measures 17 inches long and 20 inches wide. Saw is powered by ½ or ¾-horsepower motor and is available with or without cast iron base. Made by **Livingston Mfg. Co.**, South Gate, Calif.

▲ Mention Item NED-963 when writing ▲

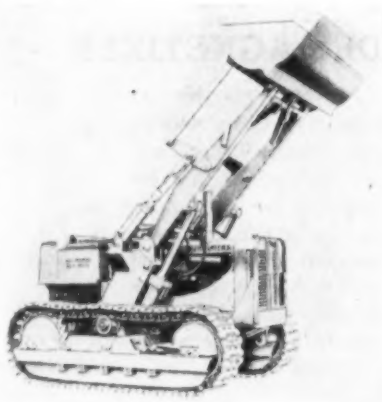
FIBER TOTE BOX



Reinforced at all wear points, this heavy duty fiber tote box is equipped to withstand hard continual use in industrial plants. Boxes are available in wide range of sizes and can be applied to various jobs such as receiving output of automatic machines, carrying parts from department to department throughout plant and for storing parts and products. Made by **William Bal Corp.**, Johnson St., Newark 2, N. J.

▲ Mention Item NED-964 when writing ▲

TRACTOR SHOVEL



Designed for use on Allis-Chalmers model HD-5 long track, rigid truck frame diesel tractor, this No. TS-5 Tracto-Shovel has hydraulically controlled bucket operated by double acting lift and dumping cylinders. Cylinders provide adequate down pressure and controlled closing and dumping of bucket. Bucket can be dumped or closed at any height.

Tractor width buckets of 1 cubic yard capacity are standard equipment. Bulldozer blades or special buckets are optional. Shovel frames are mounted directly to tractor and contain 25-gallon capacity oil reservoir. Overall length of unit is 14 feet 6 inches, width is 6 feet 3½ inches and height with bucket down is 5 feet 11⅝ inches. Made by **Tractomotive Corp.**, Findlay, O.

$58,653 SCREW COSTS SAVED BY ENGINEERS DUE TO SPECIAL DEVELOPMENT

KEENE, N. H. (Special) — A saving of $58,653 in screw costs alone for one customer, together with a reduction in weight amounting to 31½ tons, is the remarkable achievement credited to engineers of the New England Screw Company of this city. The saving was made through development of a special screw which replaced two screws formerly used.

"This saving is directly attributable to our Engineering Department," the president of the 50 year old firm, declared today. "Our customer asked us to develop a single part to replace two screw machine parts which were the bottleneck in otherwise high-speed production. Subsequent research revealed how we could make a saving of 43% in material on one item and 230% on the other. In actual production we used 23,370 pounds of brass wire as against 87,172 before. And the single part does the job better!"

Illustration on left shows one of the many special screws developed by this firm. Their Engineering Department will gladly co-operate with the engineers of any manufacturer using standard or special screws or headed shanks. The new catalog which fully describes the manufacture of New England Screws, will be sent to any company requesting it.

PNEUMATIC SCREWDRIVER

Designed for fast driving of small screws, two models of this pneumatically driven screwdriver are available to handle screws up to No. 6 range. Model No. 1671 screwdriver has free speed range of 2500 revolutions per minute and will handle delicate screw driving operations up to No. 3 screws. Model No. 1672 has free speed of 10,000 revolutions per minute and accommodates screws in the No. 3 to No. 6 range. Both models are usable wherever small screws are to be driven on production basis as in assembly of radio parts, electrical appliances, alarm clocks, telephones, plastic products, toys and novelties.

Screwdrivers feature pneumatic pick up of screw which enables operator to pick up screw with air suction finder and drive it directly into work. Both models weigh only 8 ounces each and measure 5½ inches in length. All parts are interchangeable. Made by **Keller Tool Co.**, Dept. N., Grand Haven, Mich.

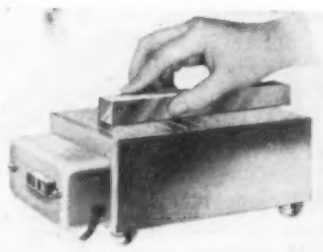
▲ Mention Item NED-973 when writing ▲

MASONRY DRILLS

Line of Red Streak carbide tipped masonry drills is designed to drill concrete, brick, tile, slate and other nonmetallic materials. They have generous carbide tips and are available in off-set and straight shank styles in drill diameters of 0.198 to 1.535-inches. Drills can be adapted to any rotary powered or hand drill. Advantages of use include up to 75 per cent faster drilling speed, and elimination of pressure drill wear and noisy percussion. Made by **Vascoloy-Ramet Corp.**, North Chicago, Ill.

▲ Mention Item NED-974 when writing ▲

DEMAGNETIZER



Improved portable demagnetizer is suitable for demagnetizing large or small pieces and requires only one quick pass to completely demagnetize object. When used with drills, punches, reamers, tools and dies, part to be demagnetized is passed over surface of unit. Larger pieces and parts can be demagnetized by passing unit over the piece. Demagnetizer has segmented flat top grid with segments spaced to produce equal magnetic field over entire surface. Surface is ground to mirror-like finish to eliminate scratching of objects handled. Automatic self-resetting switch acts also as overload cutout to protect against primary surges. Aluminum case protects unit. Standard sizes include 4½ x 7¼, 7¼ x 7½ and 7½ x 14-inch top plates. Special sizes are available and voltages and cycles as required can be supplied. Made by **Luma Electric Equipment Co.**, 1112 Dorr St., Toledo 1, O.

WHEN IS A MACHINE *"Washed Up"?*

A five-year-old Machine Tool is "washed up", for instance, if it can be replaced by one costing a few hundred dollars that will write itself off in less than a year through improved production. That's the story of Walker-Turner Machine Tools wherever metals, wood or plastics are drilled, cut or shaped.

A key to high manufacturing efficiency and **low manufacturing costs** is the modern, flexible, light machine tool. It represents small capital investment, flexibility of operation, increased productivity and low operating costs.

These machines are "light" only in weight and price. Their production output in the past eight years has astounded the management of thousands of plants—large and small—throughout the country. 34

Unit Heater . . sets new standard of quietness and heating efficiency

McCord Unit Heaters are a time proven product, embodying design based on years of experience in the heat transfer field. These units are not only rugged in design and guaranteed for use on #150 p.s.i. steam pressure, but are made attractive in appearance. Two outstanding features appeal to maintenance engineers — we use standard motors with standard bases which quickly permits the use of replacement motors should a motor fail in service—the heating element is made of individual spiral fin tubes which are free to expand independently without putting a strain on the brazed joints. The entire heating unit is spring suspended and floats free in the casing, eliminating rigid connections. Improved type fan blades deliver large volumes of air with minimum air noise and vibration which makes these units suitable for office and store use. A complete line of vertical projection type unit heaters and blast coils are also available. Catalog on request, or write for new folder "Instructions for Maintenance of Unit Heaters." **McCord Corporation**, Detroit, Mich. *Advt.*

FLEXIBLE NECK FLASHLIGHT

Equipped with flexible metallic tubing which can be bent to any angle and held in adjusted position, Flex-Spot Flash-Lites are available in three styles. Tubing can be wound around rods, pipes or other hangers or flashlight can be laid on ledge with spot light directed where wanted, thereby freeing workman's hands. Flexible tube permits entrance into close quarters and facilitates placing of light so that it illuminates relatively inaccessible locations. Junior and Junior Deluxe models use two AA Penlite type batteries and are intended for general use. Standard size uses two standard flashlight batteries for longer life and heavy duty service. Made by **Holub Industries, Inc.**, 411 DeKalb Ave., Sycamore, Ill.

▲ Mention Item NED-1001 when writing ▲

SHIELDED ARC ELECTRODES

Producing machinable welds on all grades of cast iron, Page Ni-Cast shielded arc electrodes can be used with alternating or with polarity direct current. Electrodes are recommended for repairing broken or worn castings and casting defects and for correcting errors made in machining. After machining or grinding, weld metal deposit closely matches color of cast iron parent metal.

Core has content of over 99 per cent nickel. Electrodes have quiet stable arc that is free from spatter with minimum of penetration and heating of cast iron. Weld metal deposit is sound, homogeneous and free from porosity. Electrodes are available in 3/32, 1/8, 5/32, and 3/16-inch diameters and are packed in 10-pound cartons. Made by Page Steel & Wire Div., **American Chain & Cable Co.**, Monessen, Pa.

▲ Mention Item NED-1002 when writing ▲

CHEMICAL FEEDER

Available in range of sizes to handle from 3000 to 1,000,000 gallons of water per month, Micromet chemical feeders proportion chemical flow into industrial water to prevent corrosion or scale in hot water or cooling systems. Feeders hold up to 20, 50 or 100 pounds of Micromet at one charge. Chemical dissolves slowly at rate of 25 per cent per month so that only that much of initial charge need be renewed each month. Treatment gives assurance that heat exchange equipment and air conditioning units will provide efficient service and that taste or potability of water used for drinking or cooking will not be affected. Made by **Calgon, Inc.**, 321 Fourth Ave., Pittsburgh 30, Pa.

Take a Dart Apart

Two bronze seats ground to a true ball joint *insure* a drop-tight connection without excessive wrenching. Regardless of length of service, a Dart uncouples easily and without damage—is ready for a new job wherever needed. Body and nut are of high-test air-refined malleable iron—are practically indestructible.

That's why it pays to standardize on Darts. Ask your supplier to send some with your next order.

Blanking Forming Pelleting Shearing Marking Assembling

ON SCORES of jobs like these, MULTIPRESS users report increased production and efficiency, better results.

The reason: remarkable operating flexibility has been built into the highly compact, self-contained basic MULTIPRESS—and an unusually wide range of standard MULTIPRESS controls, toolings and accessories multiplies this flexibility!

In addition, Denison engineers are constantly finding better ways to apply MULTIPRESS advantages to operations of every kind.

MULTIPRESS offers 4, 6, or 8-ton units in seven models . . . manual or automatic controls . . . accessory benches, worktable extensions, side shelves and bolster plates . . . attachments for indexing, pelleting, foil marking, etc. . . . toolings for almost any need. Write for details.

"PIONEER" STEEL SHAFT HANGERS

Thousands upon thousands of these "Pioneer" Steel Shaft Hangers are in daily use—and have been ever since 1914. They are unbreakable—their superior strength and rigidity make them dependable. They are one-third lighter than the old style cast-iron hangers, *and therefore cost less f.o.b. ceiling—and that's what counts.* Cut costs of handling, hauling and millwrighting by using "Pioneer" Steel Shaft Hangers, made by the manufacturers of the famous "Hallowell" Ready-Made Shop Equipment of Steel and "Unbrako" Screw Products.

WATER POWERED GRINDER

Powered by water supply from any tap, Turbo grinder equipped with 3-inch silicon carbide grinding wheel can attain speeds from 3000 to 10,000 revolutions per minute, depending on water pressure available. Power unit is small enough to fit in palm of hand. Vinylite hose with slip-on connection fits most water faucets and connects unit to source of water supply. Jet impeller and case are made of die cast aluminum. Case is chrome plated. Hardened stainless steel shaft operates in Chrysler Oilite bearings which require no lubrication. Grinder unit is priced at $8.95 retail. Made by **Hudson Products Co.**, 4400 St. Aubin, Detroit, Mich.

V-BELT PULLEYS

Added to line of step-cone pulleys, variable speed pulleys, flexible couplings and plain pulleys (*Item* NED-4268, *July* '46) 11 and 16-inch pulleys are available. These additions extend range of pulley sizes to include from 1½ to 16-inch diameters. Pulleys are balanced for high speed operation and have precision-bored holes that are held to close tolerances. Made by **Congress Tool & Die Co.**, Die Casting Div., 3750 E. Outer Dr., Detroit 12, Mich.

▲ Mention Item NED-1012 when writing ▲

OIL FILTER

Capable of removing impurities as small as 5 microns, Greer Micronic oil filters can be supplied to meet almost any pressure and flow requirements. Illustrated type is 30-gallon per minute 250-pound per square inch filter. In operation, fluid enters filter at intake port and is directed against shield which diffuses flow and prevents impurities from striking element directly. Oil then flows inward through element, through series of oil slots in center shaft and out through discharge port. Sediment collects in bottom of shell and is eliminated through drain port.

Filtering element of unit can be replaced in less then 10 minutes. There are no moving parts to replace and only maintenance requirement is replacement of filtering element when abnormal amount of impurities is present in fluid. Made by **Greer Hydraulics, Inc.**, 454 Eighteenth St., Brooklyn 15, N. Y.

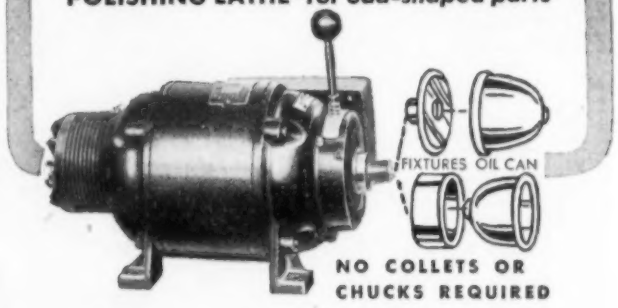
New Vacuum Grip

POLISHING LATHE—*for odd-shaped parts*



Parts which cannot be held by chuck or collet—odd-shaped parts such as oil can bodies, spun shapes and flat stampings—are now readily handled by the new Crozier Vacuum-grip Polishing Lathe.

The lathe generates its own vacuum, without piping or glands. It starts, holds the work (copper, brass, aluminum, zinc, magnesium, plastic as well as steel), stops instantly, releases the work automatically for low cost production. All work is held firmly for polishing and burnishing and many other operations.

We design and make special fixtures for your jobs. This service is speedy and inexpensive.

Model 1VPL Crozier Vacuum-grip Polishing Lathe, has a 1"-8 thread spindle. Furnished with an 1800 or 3600 r.p.m. 220-440 or 550 volt 3-phase 50 or 60 cycle motor, the price is $290 f.o.b. factory.

Write for data on complete lathe line.

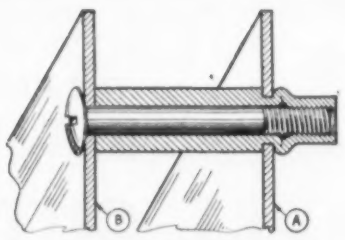
RIVNUTS SOLVED THIS TOUGH FASTENING PROBLEM



FASTENING of spaced double walls on gas stove backs was too complicated and awkward; air circulation was faulty. This problem was solved with a 10-24 thread aluminum Rivnut with a ½" spacer head. Using simple header tool, Rivnuts were inserted in sheet "A" and upset. With matching holes of outer sheet "B" in place, screw attachments were entered and screwed into the strong threads of the Rivnuts. Air could circulate freely, fire hazards were reduced.

NEW "RIVNUT DATA BOOK" *includes illustrated uses, types, tools, test data. Perhaps your fastening problem will be answered in these 40 fact-packed pages. Write to*

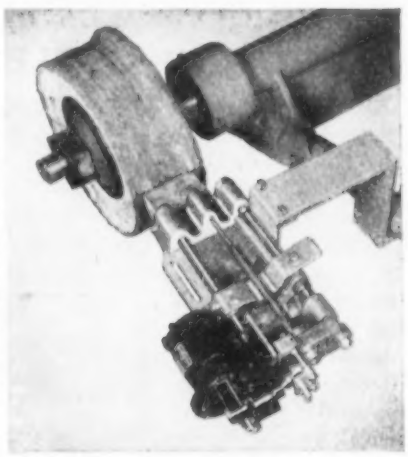
SHEET PLASTIC FOLDING UNIT

Hand fed foot operated Thermocreaser will rapidly crease or fold cellulose acetate, ethyl cellulose, vinyl acetate and cellulose nitrate plastic sheets at right angles. Machine is thermostatically controlled and will handle thermoplastic sheeting up to 30 inches in width. Either rubber or metal forming die can be used and actual crease or fold is formed as heated blade comes in direct contact with stock and presses it into metal die or rubber pad.

Folding units are designed to operate on 115 or 230-volt alternating or direct current circuit. Standard operating controls include indicator lights for current and thermostatic element, adjustable thermostat to raise or lower temperature of creasing or folding blade, thermometer which registers blade temperature and movable back gages for proper creasing position of material. Machine is free of sharp corners and recessed edges and mechanism is fully enclosed. It requires no lubrication. Totally inexperienced operator, after brief training and practice, can form right angle bends with repetitive uniformity. Made by Plastics Equipment Div., **Taber Instrument Corp.**, Dept. NED, 111 Goundry St., North Tonawanda, N. Y.

▲ Mention Item NED-1021 when writing ▲

COMPOUND APPLICATOR



Operating at fourteen strokes per minute, this Nankervis buffing wheel compound applicator has feed range of from 0.0015 to 0.015-inch per stroke. Applicator can be mounted on any automatic machine, either right or left hand, and is adaptable for operations from simple to complex multiple stage buffing. Drive is by means of totally enclosed geared head motor. Applicator clamp is adjustable to handle various thicknesses of compound and sticks up to 4 inches in length can be used.

Total weight of unit is 20 pounds. Its light weight makes it adaptable to floating heads without disturbing balance. Motors to drive applicator are available for operation on 110, 220 or 440 volts. Special carriers for extremely wide cakes can be furnished. Made by **George L. Nankervis Co.**, 5442 Second Blvd., Detroit 2, Mich.

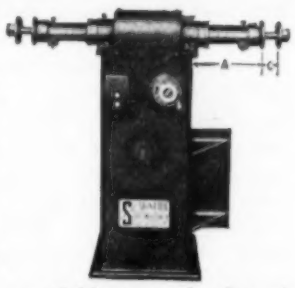
BUFFING & POLISHING UNIT

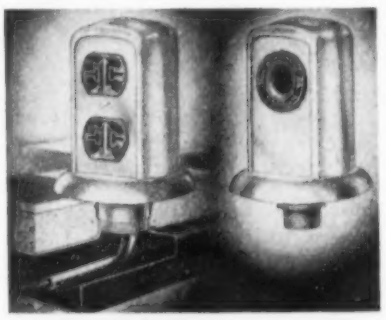
Line of nine models of infinitely variable speed buffing and polishing machines ranging from 1 to 15 horsepower includes redesigned 2 and 3-horsepower models of either enclosed or open spindle types. Illustration shows enclosed spindle construction. It has four ball bearings, sight feed oil gage on each bearing housing and shaft lock. Enclosed ball bearing motor is mounted on adjustable base attached to back of pedestal with power transmitted to spindle through belt drive. Spindle speeds adjustable from 1500 to 3000 revolutions per minute are available instantly through Speedial control. Change of spindle speed is recorded immediately on dial. Drive is guarded and units include pushbutton safety starter having overload protection. Made by **Standard Electrical Tool Co.**, 2488 River Rd., Cincinnati 4, O.



▲ Mention Item NED-1032 when writing ▲

ELECTRICAL OUTLETS

Designed for use with Nepcoduct underfloor wiring distribution systems, these two service fittings screw into standard outlets of underfloor duct. Fitting No. 7903, at left of illustration, has standard duplex T-slot receptacle and is to be used for high potential light and power wiring. Telephone, buzzer and intercommunication low potential wiring in plant offices and office buildings are serviced at floor levels with fitting No. 7904, at right of illustration.



Either model electrical outlet is wired and assembled with single screw through housing top. One-piece housing double locks in flange base to eliminate possibility of shearing off wires. Fitting No. 7903 can be furnished with 3-pole twist lock receptacles instead of duplex when specified. Illustrated installation suggestions are included in individual shipping containers. Made by **National Electric Products Corp.**, Chamber of Commerce Bldg., Pittsburgh 19, Pa.

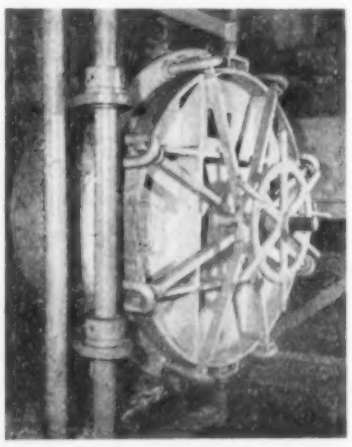
Bricks are provided with grooves and nubs that allow ample play for expansion and contraction of heater coil and prevent buckling or damage to bricks. Made by General Ceramics & Steatite Corp., Keasbey, N. J.

▲ Mention Item NED-1052 when writing ▲

CONDENSATE OIL FILTER

Developed for naval use in filtering oil from condensate, Hercules filters will handle exhaust from engines of up to 7000 horsepower. Oil content of filtered condensate returned to boilers is less than 0.1-part per million. By using two filters in installation, continuous service is assured. These oil filters are now available for industrial, marine and other uses.



Filter layers of refined asbestos and diatomaceous earth are used. They are deposited by recirculation on series of screens within enclosed filter tanks to separate oil from condensate. Asbestos fibers perform secondary function of binding diatomaceous earth into coherent filter layer which will withstand shock conditions. Runs of as high as 90 hours under capacity requirements are obtainable before standby filter is cut in. Filter is of pressure leaf type. Made by Hercules Filter Corp., 204 21st Ave., Paterson 3, N. J.

It's New! Better! Different!
Black Arrow HOLLOW AIR Spray Gun

Perfect Spray Patterns--Faster, Easier, Less Cost!

Production painters call Black Arrow's HOLLOW AIR Spray Gun the most sensational development in the spray gun field. That's because of its patented HOLLOW AIR Atomizer Head which, in terms of spray results, gives you five big advantages.

1. The widest, wettest, most uniformly distributed spray pattern you've ever seen.
2. Complete atomization of paint over the entire pattern.
3. No spotting at edges, no runs, sagging or orange peel.
4. More economical spray because HOLLOW AIR usually requires less pressure.
5. Much softer spray because HOLLOW AIR blends paint and air perfectly.

See your jobber! Write for catalog.

The Secret of HOLLOW AIR Atomization

Two hollow cones of air, perfectly delivered in relation to the center paint jet by the patented HOLLOW AIR Atomizer Head, are responsible for HOLLOW AIR's superior results. These cones of air carbuerize paint evenly, thoroughly—produce symmetrical patterns, uniformly distributed. This enables operators to produce perfect spray patterns, easily, consistently.

Time studies reveal that when mechanics must fight dirt and grease on machinery, tools and equipment, production speed is slowed 25% to 40%. Periodic JENNY Steam-Spray cleaning not only saves these precious man-hours, but often prevents costly shutdowns by revealing defects in machinery in time to permit repairs before failures occur. JENNY cleans floors, runways, windows, walls, skylights, 8 to 10 times faster than by hand-cleaning methods.

Hundreds of manufacturing plants have adopted JENNY as the quickest, most efficient method for all their cleaning jobs. Let us show you how to increase your plant production by getting rid of speed-retarding dirt and grease the JENNY Steam-Spray Way.

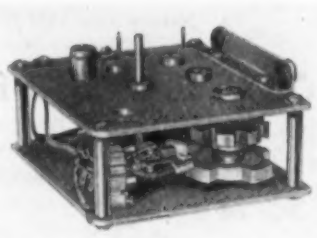
DIRECT CURRENT MOTOR



Improved by use of speed control which utilizes principle of polarized magnetic drive of vibrating reed, constant speed direct current motor is adapted to industrial and commercial applications which have heretofore required synchronous motors. Immediate self-starting is assured. This motor maintains constant speed regardless of voltage variations and attains full speed almost instantly. Current consumption varies from 0.06 to 1 watt, either from battery or direct current line sources. Models are available for operation on 3, 6, 12, 24, 32 and 110 volts and all are small enough to be held in hand. They are recommended for operation of marine beacons and buoys, aviation signal and obstruction lights, railroad signal devices, time delay controls, automatic radio transmitters and telephone interrupters. Made by **Amglo Corp.**, 4234 Lincoln Ave., Chicago 18, Ill.

VULCANIZING— with the New Sarco No. 9 Steam Trap

Vulcanizing uses lots of steam—intermittently. And the cost of steam is a considerable part of the cost of the job.

The New Sarco No. 9 has all the advantages of the thermostatic trap plus greatly increased capacity and speed, making it practical for any heavy heat using job where it is advisable to use up all the available heat before the condensate is released.

Consider this trap now to replace others—which may be causing unnecessary losses in process, heating, and other hook-ups in your plant. And for best results, put one on every line and steam coil. Ask for Catalog No. 250.

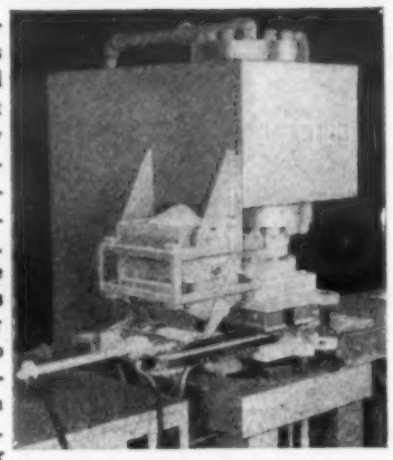
HYDRAULIC TILE PRESS

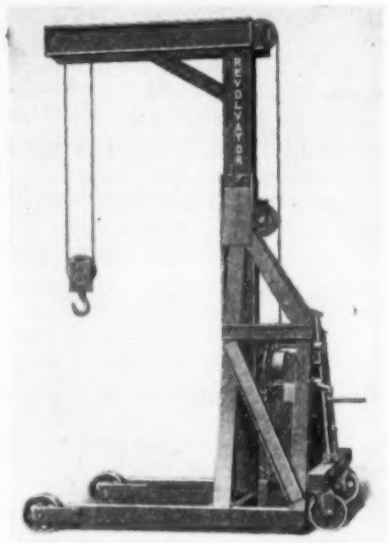


Automatic in operation, hydraulic tile press is especially designed for production of flat and stretcher tile. Clay is automatically unloaded in uniformly measured amounts from hopper to shaker box. Shaker box is adjustable for number of passes over die cavities per cycle and fills each to uniform depth. Floating head de-airs upon initial impact with clay. As ram descends under hydraulic pressure, dies are guided and aligned with die shell. Uniform clearance is thus maintained between upper and lower dies with shell and no bumping occurs upon die entry. As result, lamination caused by die misalignment is eliminated.

Ram action is adjustable from 12 to 14 complete cycles per minute. One operator can handle up to four machines efficiently. Made by **Hufford Machine Works**, 211 N. Broadway, Redondo Beach, Calif.

▲ Mention Item NED-1071 when writing ▲

PORTABLE CRANE



Designed with folding upper section which can be lowered to clear low doorways and other overhead obstructions, portable crane is operated by hand crank. When in raised position, uprights are locked in place by locking pins. Crane is equipped with low speed gear for lifting heavy loads and its maximum capacity is 4000 pounds. It is recommended for use in machine shops, assembly departments, stock rooms, repair shops, warehouses, garages and service stations. Unit has floor lock and steering handle is geared to front wheels which are Timken bearing equipped. Made by **Revolvator Co.**, 2032 86th St., North Bergen, N. J.

POPULAR!
because it's
portable— practical— profitable

WELLS No. 8

CAPACITY: 8" x 16" Rectangular 8" Diameter Round

Users like Wells Metal Cutting Band Saws for a number of very good reasons. In the first place these saws, though rugged in design and construction, are compact, self-contained, and readily portable. You can move them to a point most convenient to the work. They take up little floor space. Wells saws are also 100% practical—simple to operate, yet capable of handling a wide variety of work without special fixtures. A third important reason for widespread popularity, is that thousands of users have found them highly profitable. For a small investment, you get a versatile tool that can help you in many ways . . . in breaking bottlenecks . . . in getting work out in less time. See your local Wells distributor, or write for details.

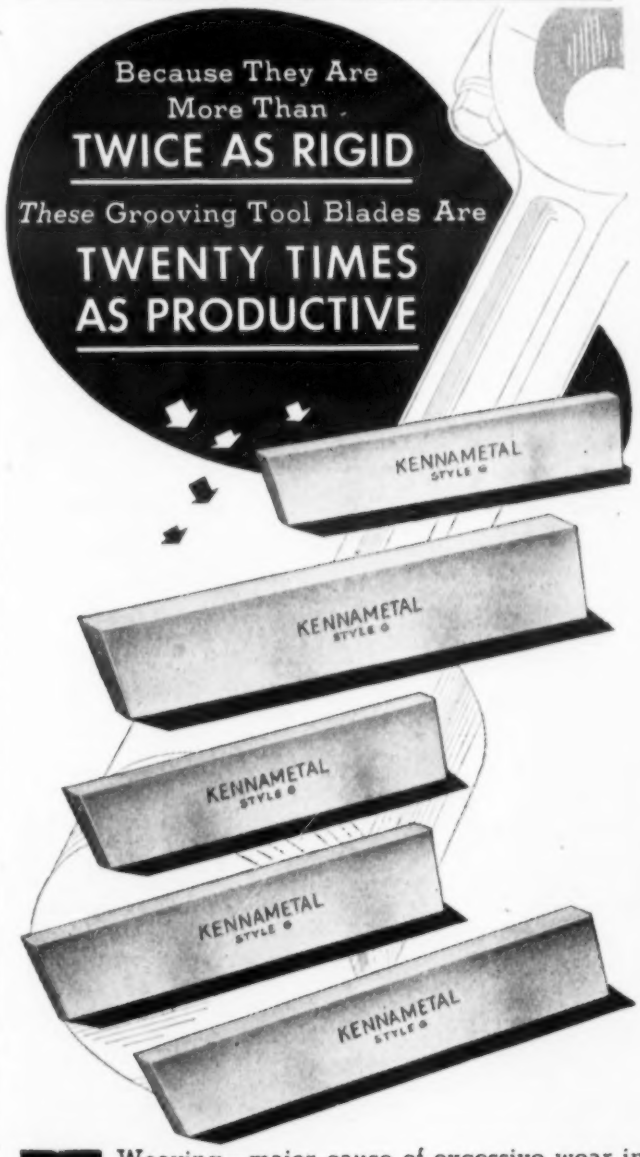
Because They Are More Than

TWICE AS RIGID

These Grooving Tool Blades Are

TWENTY TIMES AS PRODUCTIVE



Weaving—major cause of excessive wear in slender grooving tool blades—can now be overcome by using sturdy, hard blades of solid Kennametal. Here's one example—

In a large automobile plant, solid Kennametal blades are now cutting piston ring grooves in 18,000 to 20,000 aluminum alloy pistons before resharpening, whereas the previously-used carbide-tipped steel-shank tools had to be serviced after cutting grooves in 800 pistons.

These new solid Kennametal blades cut better, longer, not simply because they are much *harder* than steel, *but primarily because their resistance to deflection is two to three times* as great as steel. Weaving that causes erratic cutting pressures, strains, and rapid cutting edge failure is thereby minimized.

Kennametal grooving tool blades are made in standard widths from .080" to .250". Other sizes are available. Ask our nearest representative, or write for prices and particulars.

VEMCO DRAFTING MACHINES

For Faster, More Accurate Work

Effortless movement . . . positive setting and control . . . flexibility . . . elimination of an awkward assortment of drafting tools — these are a few of the many important advantages of VEMCO drafting machines. They increase drafting room capacity as much as 40% and improve accuracy without wasted effort!

Only VEMCO drafting machines give you *all these features:*
- Simple tightening device produces proper band tension.
- Convenient, thumb-action indexing for each 15° in entire circle.
- Exclusive articulated arms permit raising drafting head without special hinge; moreover, permits scales to be flat.
- Positive scale holder firmly holds any standard scale, yet permits instant removal.

Ask your VEMCO distributor for a demonstration, or write us for catalog of VEMCO drafting machines and drawing instruments.

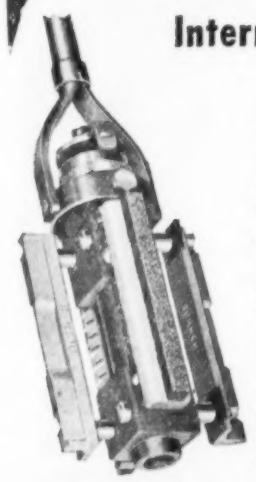
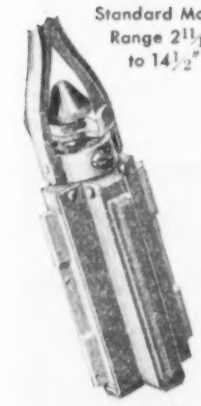
In Cylinders from 2" to 14½" in Diameter SUNNEN Portable Cylinder Hones Provide Smooth Accurate Internal Finishes



Standard Model Range 2 11/16" to 14½"



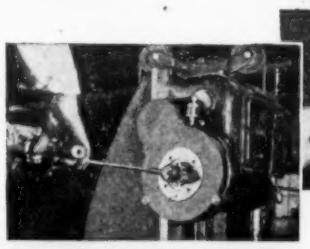
Junior Model Range 2" to 2.6"

These hones provide a fast, easy, practical, economical way to produce internal finishes that are guaranteed to be accurate within .0005". Straight round holes are produced without disturbing previously established alignment. Sunnen Portable Cylinder Hones produce any commercially required finish with full bearing surface. They correct errors of out-of-round, taper, bell-mouth, wavy condition, distortion — and remove tool marks or other surface imperfections.

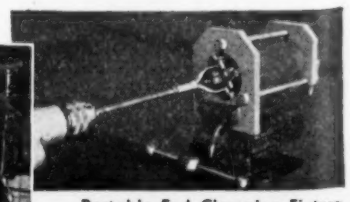
With Sunnen Portable Cylinder Hones stock removal is fast. They are portable, can easily be taken to the job. Free floating universal joint permits operating at an angle. Adjustment is simple, easy and positive. Easy to use, can be set up for operation in one minute. Handles any metal or plastic except lead and babbitt.

Sunnen Portable Cylinder Hones are ideal for *Selective Fitting of Mating Parts — Small Lot or Odd Size Production — Salvage and Production Repairs — Maintenance of Operating Equipment.*

If you have an internal finishing problem, call a Sunnen Engineer—or write for free bulletin, form No. X-AN5001.



Sunnen Portable Cylinder Hone saved dismantling this machine to install a new boring bar.



Portable End Clamping Fixture enables part to be honed accurately without distortion.

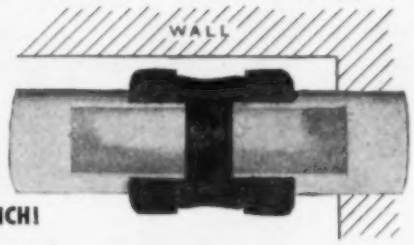
SAVE TIME AND MONEY IN CLOSE-QUARTER PIPE JOINING

with DRESSER FITTINGS

- NO THREADING
- NO ACCURATE ALIGNMENT
- THE ONLY TOOL
- ...A SIMPLE WRENCH!



Style 65—Available in all standard sizes and shapes.

For complicated "close-quarter" piping connections—on pumps, and other equipment. Easy leak-proof assembly is assured. No "exact" pipe alignment—"cut-in" a matter of minutes. Dresser gasket forms lifetime seal, and absorbs vibration. Ask your jobber or write: ***Dresser Manufacturing Division, 625 Fisher Ave., Bradford, Pa.***

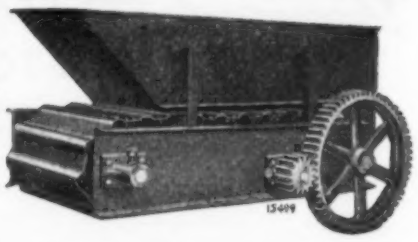
MECHANICAL FEEDERS

STEEL APRON TYPE
For heavy duty handling of lump coal, stone, ores and materials exerting heavy impact and extensive wear.



RECIPROCATING PLATE TYPE
For handling materials not excessively abrasive such as coal which do not cause undue wear on sliding plate.

BELT TYPE
For feeding fine abrasive or lump material not exceeding 2-1/2". May be equipped with magnetic head pulleys to serve as separators.

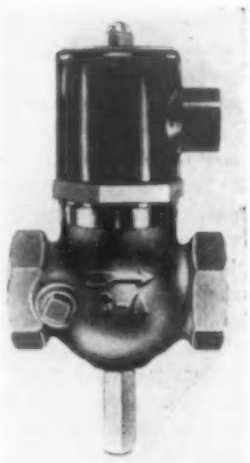
MAGNETIC GAS VALVE



Designed to control flow of natural or manufactured gas in domestic heating systems, conversion gas burners, water heaters and other gas fired units, model No. SG 1 magnetic gas valve can be used with any two-wire snap action room thermostat. Valve is easily installed in vertical position in horizontal gas line between gas supply valve and burners. Arrow, on side of valve, indicates direction of gas flow. Conduit opening of 1/2-inch is provided to permit installation of BX or conduit if desired. In case of prolonged power failure, provision is made for manual operation. Made by **Gleason Avery, Inc., Auburn, N. Y.**

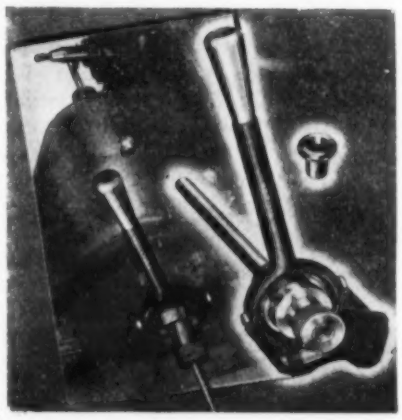
TELEPHONE INDEX

Attachable to any telephone, this Tel-Eze plastic telephone card index file serves as time saver in providing quick ready reference material. Unit looks like part of telephone. Cards can be removed easily for typing and refills are obtainable. Index file holds pencil also. Illustrated model S unit retails at $1.50. Made by **Le Shore Corp.**, 47-30 Vernon Blvd., Long Island City 1, N. Y.

▲ Mention Item NED-1100 when writing ▲

LEVER-TYPE DRAWBAR



Employing patented co-ordinate cam principle which reduces friction to minimum and eliminates need for fingers, precision lever-type drawbar is designed for production use on ½-inch collet capacity lathes. It is provided with three positions of tension adjustment. Positive gripping tension is applied over range of three adjustments, automatically adapting itself to diameter of stock being handled. Undersize, standard and oversize stock can be handled without taking unit apart. Attachment is rigid and there is no chatter at highest speed. High leverage reduces operator fatigue. Made by **General Die & Stamping Co.**, 270F Mott St., New York 12, N. Y.

The FLEX V TRADE-MARK

Belt Fastener for A and B Belts of open end construction

Size No. A180 for A Belts
Size No. B214 for B Belts

Flex V fasteners are made in two sizes for joining A and B V-belts of special open-end cross-woven fabric construction and on drives rated as light duty with a belt speed of not over 3000 feet per minute. The fasteners must not be used on heavy duty or high speed drives or for joining or repairing V-belts that were originally endless.

Flex V fasteners are easy to apply with the special applicator tool. The separable hinge joint makes for quick replacement of V-belts without dismantling shafting or machinery. Flex V fastened V-belts can also be run on V Flat Drives for there is no metal on the under side of the belt to contact the flat faced pulley.

Folder No. V-12 gives complete details on this Flex V fastener with list prices, special tools and application information. Your request will bring a copy.

Order from your supply house

FLEXIBLE STEEL LACING CO.

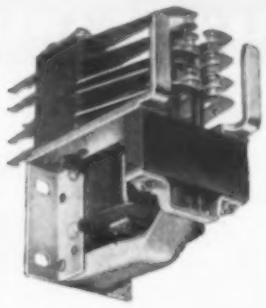
A PROVED Relay for NEW uses



Originally developed for our Vehicle-Actuated Traffic Control Systems, the AC2 relay is now generally available. Fast-acting, compact, built to handle up to ten million operations a year. Clean operation of as many as ten sets of contacts on each relay, with circuit closure of as little as .010 seconds, is provided for on this precision instrument.

Even where insulation resistance in excess of 300 megohms is required after long service, the AC2 relay assures it through a method of encasing each individual contact spring in phenolic insulation.

All connections, including coil connections, at rear make the AC2 well adapted to vertical rack mounting. Drilled with four mounting holes for No. 8 screws. Centers 1 5/16" horizontal x 13/16" vertical.

Coils for 115 volts, 60 cycles, and 12 volts, 60 cycles, and pure silver contacts 5/32" diameter (rated 5 amps. 115V AC non-inductive) and 7/32" diameter (rated 10 amps. 115V AC non-inductive) are standard. Other contacts and coils can be supplied on special order.

Overall width 1¾". Relay extends 2 7/16" forward and 9/16" backward from mounting surface. Overall height 2¾" from bottom of armature to top of vertical contact guards. This height will accommodate 4 average contact assemblies, 2 in each pileup. Each additional contact assembly adds approximately ¼" to the overall height.

Our Engineering Department can be of valuable assistance to you in adapting this relay to your present products or your new designs. Write us your problems and requirements.

For more than 30 years, K-G Welding and Cutting Company has manufactured welding and cutting torches and regulators with a single purpose in mind—to produce only the finest possible oxy-acetylene apparatus. That this aim has been achieved is demonstrated by the fact that with few distributors and little sales effort, K-G apparatus is in use far and wide. K-G torches and regulators have literally sold themselves . . . have proved so efficient and economical that many users have ordered and re-ordered *by mail* for many years.

Now, as a subsidiary of Air Products, Incorporated, K-G is putting into operation an entirely new and broader sales policy designed to make the K-G line available everywhere for direct purchase. New items are being added to provide a complete line of superior equipment for every welding and cutting requirement. Soon there will be authorized K-G distributors, with complete stocks and factory-trained repair experts, in all principal cities. In the meantime, users of apparatus are invited to learn more about the superior K-G line. Write today for the K-G Catalog—address K-G Welding and Cutting Company, Dept 240, 515-19 W. 29th Street, New York 1, N. Y.

TO USERS OF OXYGEN: Air Products, Incorporated, manufacture equipment for the economical production of oxygen, nitrogen and hydrogen by the user of more than 200,000 cubic feet per month. Learn how you can cut costs and speed production by producing your own gases with Air Products equipment—write for details. Address Air Products, Incorporated, Dept. G, Box 538, Allentown, Pa.

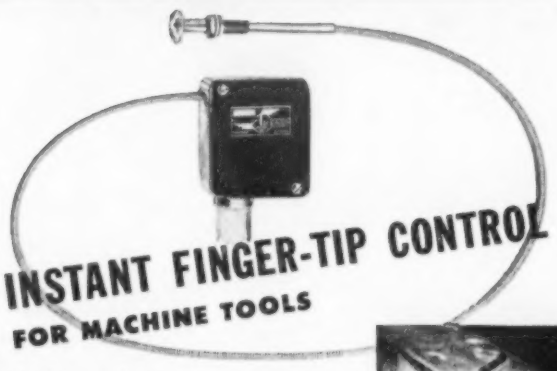
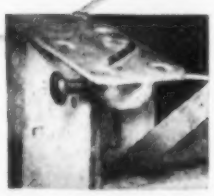
REMOTE SWITCH CONTROL



INSTANT FINGER-TIP CONTROL
FOR MACHINE TOOLS



Here's the new low-cost Arens Remote Switch Control which provides instant starting and stopping for machine tools without rewiring. It also reduces machine tool installation costs and provides greater safety.

The control head may be quickly mounted on the machine at the point most convenient for the operator. The flexible cable can then be carried to the switch box which may be located either adjacent to the motor or convenient to present wiring or junction box.

If desired the control head may be mounted so the operator with body pressure against the switch button can turn the machine off.

Write for Bulletin No. 11 Today

Many Models Available
Standard Models (such as the installation above) as well as special units are available for any type of machine tool operation. This control is also particularly economical for installation on multiple units.

ARENS CONTROLS, INC.

▲ Mention Item NED-1107 when writing ▲

AIR CYLINDER

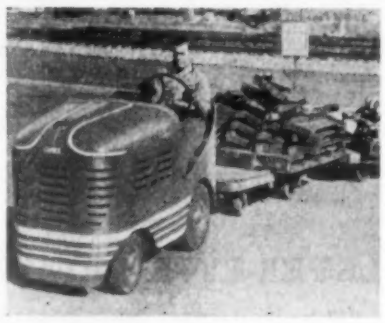
Employing threaded cylinder caps, Modernair non-cushion type air cylinders require no tie rods. Cylinder caps are fabricated from cast aluminum alloy which is heat treated to produce high tensile strength and pressure resistance. Saving of installation space is possible by elimination of tie rods and by design of end caps which permits use of numerous types of mounting brackets, alone or in combination. Brackets are available for end plate, foot bracket and swivel mounting and all are interchangeable.

Caps can be rotated 360 degrees on cylinder without affecting permanence of seal. This simplifies installation plumbing by elimination in many cases of need for elbow or T-fitting in connecting line into or from cylinder. Pressure and volume losses because of fitting restrictions are thereby reduced.

Aircraft type O-ring packings are employed at all points of wear or possible leakage to eliminate all metal-to-metal contact. Units are available in standard range of 2, 2½, 3 and 4-inch diameters with optional stroke lengths. Cylinders are fabricated of seamless brass cylinder stock for corrosion resistance. Air, water or oil actuation can be employed. Made by **Modernair Corp.**, 4222 Hollis St., Oakland 8, Calif.

▲ Mention Item NED-1109 when writing ▲

TOWING TRACTOR



Improvements on this Clarkat towing tractor include wide steering axle for increased stability and flattened nose for pushing loads. Units are available with either pneumatic or solid tires front and rear. Tractors have center pivoted suspension of steering axle and center control type steering gear operated through worm and gear sector. Accessibility to motor and drive units has been improved. Standard automotive type transmission provides three speeds forward and one reverse. Water pump is integral part of engine cooling system and mechanical governor provides close control of speeds. Made by Clark Tructractor Div., **Clark Equipment Co.**, 1952 Arze St., Battle Creek, Mich.

▲ Mention Item NED-1110 when writing ▲

FOGPROOFING CLOTH

Available in three distinct types for fogproofing eyeglasses, face shields and automobile windshields, Clearsite impregnated cloth does not leave messy or sticky substances on hands. It is applied by wiping cloth on inside surface of glass. Clearsite Nos. 100, 200 and 300 are to be applied to glasses, face shields and windshields respectively. Cloth can be carried in car or kept in drawer of work bench. Sample orders of product will be filled at $1 each, postpaid to any address. Made by **Clearsite Laboratories**, Dept. C-6, 6100 Butler St., Pittsburgh 1, Pa.

As the white outline indicates, a standard unit of much greater frame size would be required to do the work of Speedaire.

SPEEDAIRE twins save space, reduce weight, cut cost $385

THESE two Speedaires are installed in the northern New York mill of a well-known paper company. The reducer in the foreground drives a paddle wheel circulating hot-pond water; the other drives a chain conveyor bringing rough wood into the hot pond.

In operation over a year, the Speedaires are completely satisfactory. As is apparent from this photograph, they saved valuable space, permitting motors and drives to be grouped more closely. Load on the floor was reduced 1300 pounds (Speedaire's weight is less than half that of a conventional worm-gear reducer) and cost saving was $192.50 per unit.

Speedaire is Cleveland's new fan-cooled worm-gear speed reducer. Because it is fan-cooled, Speedaire will do more work—will deliver up to *double the horsepower* of standard worm units of equal frame size, at usual motor speeds. It can be installed economically on many applications where other types have been used heretofore—giving you the advantages of a compact right-angle drive. Speedaire gives the same long, trouble-free service characteristic of all Clevelands.

For full description, send for Catalog 300. The Cleveland Worm & Gear Company, 3283 East 80th Street, Cleveland 4, Ohio.

Affiliate: The Farval Corporation, Centralized Systems of Lubrication. In Canada: Peacock Brothers Limited.

FILTER PRESS

Alkyd resins, paints, varnishes, oils, cutting oils and coolants can be filtered with this vertical stack filter press. Combination construction of plate and frame provides for quick and easy cleaning and removal of cakes through individual frame latching arrangement. Starting with top of frame, each section is individually latched in elevated position to permit filter paper and cake to be pulled forward out of press. Filtering area is 31 square feet with 2 cubic feet of cake space. Filter press will handle, in addition to liquids already listed, solvents, molasses, honey, fruit syrups, soaps, liquid shampoos, shaving lotions, fish, linseed, castor and essential oils. Made by **Youngstown Miller Co.**, 675 Main St., Belleville 9, N. J.

▲ Mention Item NED-1119 when writing ▲

LOW TEMPERATURE SOLDER

Facilitating wide range of soldering applications for aluminum work, All-State No. 39 low temperature rub-on aluminum solder has good matching color and fair resistance to corrosion. It is recommended for filling and soldering where tightness is essential but strength unimportant. It can be used to repair blowholes, build up worn surfaces on aluminum castings, salvage and make changes on foundry patterns and for repair of cracks in aluminum cylinder heads. Made by **All-State Welding Alloys Co.**, 96 W. Post Rd., White Plains, N. Y.

▲ Mention Item NED-1120 when writing ▲

ARC WELDING UNIT

Equipped with arc booster that augments current the instant arc is struck, this Fleet-Arc alternating current welding unit features welding ease, depth of penetration, wide range of output, economy, safety and long service life. In operation, arc is started the moment electrode touches work. Selector switch on front of welder governs amount of booster current to be used in striking arc. Current control, continuous and self-adjusting, is provided by rotating reactor control that is held in position by cone brakes.

Separate power transformer and adjustable reactor control enable unit to duplicate wide range of output of direct current welders. High power factor, reduction of condenser requirements and less shock to operator are gained through lower open circuit voltage. Units are available in 200, 300 and 500 amperage ranges. Made by **Lincoln Electric Co.**, Dept. AP-574, Cleveland 1, O.

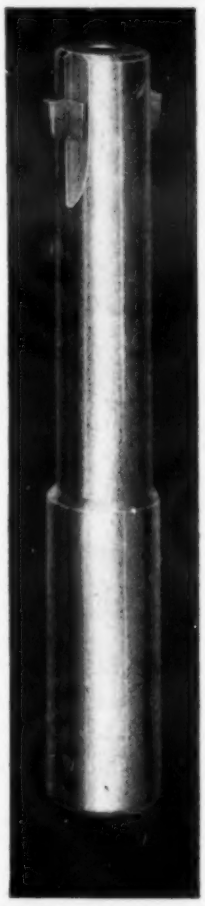
THIS NEW MADISON ROUGH BORING TOOL SLASHES HOLE COSTS!



This new Madison Rough Boring Tool is the fastest changing, fastest cutting boring tool made. Team it with the Madison Reaming Cutter for accurate, finely finished, low cost holes. Like Madison Reamers, the Roughing Cutter is easily set to decimal sizes within its range. Because cutters may be presized, disturbance of the setup is unnecessary when inserting a ne wor sharpened cutter in the bar.

The Madison locating feature automatically centers cutter in the bar, equalizing the load on cutting elements.

The cutter block is formed by the Madison cutting blades themselves. This exclusive Madison feature creates a more rugged cutter with no delicate mechanisms or separate parts. Madison Roughers have been used to bore holes as large as 17.590 and are made in the smaller range to 1" size.

These exclusive Madison features of simplified design are the reasons why the new Madison Rough Boring Tool performs with amazing speed. On field tests, stock removal requiring three passes with a conventional single point tool was executed in one pass with this new Madison Rougher.

Write for the Madison catalog today. Get the facts on Madison Boreamers, the tools that make one operation out of boring and super finish reaming.

You Can't Beat 'Em For Quick Cleanout

CRANE Iron Body Clamp Gate Valves

WORKING PRESSURES: Up to 150 Pounds Saturated Steam; 225 Pounds Water, Oil, or Gas, Non-Shock.

In piping services where valves need frequent cleaning, Crane Wedge Disc Clamp Gates simplify and speed such work. Just loosen their "U"-bolt bonnet joint and the complete bonnet assembly lifts out, including the disc. Replacing it is just as easy.

ALWAYS TIGHT—With these valves, you can afford to take time for regular inspection and servicing that result in longer valve life. Repeated opening of bonnet joint doesn't affect its tightness. Also, Crane design in the seats and disc insures long-lasting tight closure.

ALL-IRON OR BRASS-TRIMMED—Ideal for many services, Crane Clamp Gate Valves come in OS&Y; Inside Screw; and Quick-Opening patterns; screwed or flanged ends. Sizes up to 4 in.

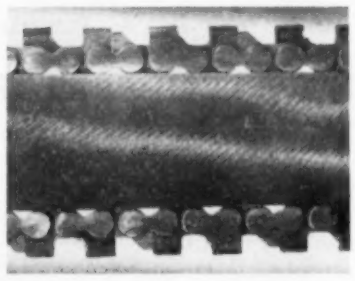
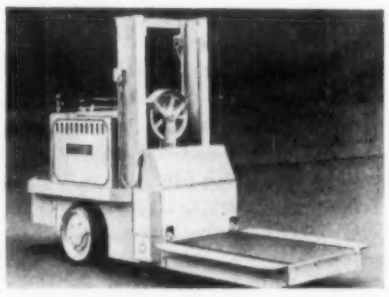
POWER SAW CHAIN



Difficult cuts, such as diagonals or those through heavy roots of swelled tree butts, can be handled with complete guide bar freedom with this model Titan R power saw chain. Principal feature of unit is that chain is easy to file. Operator, using round file, can sharpen chain on sawing machine without destroying set. No swedging or setting and only occasional jointing are required. Made by **Mill & Mine Supply, Inc.**, 2700 Fourth Ave. S., Seattle 4, Wash.

▲ Mention Item NED-1130 when writing ▲

DIE HANDLING ASSEMBLY



Making it possible for operator to push die from load platform onto press or storage rack quickly and easily, this die handling assembly is built into Mercury Mogul 5-ton high lift chassis or 3-ton high or low lift chassis truck models. Unit consists of two power driven die movers that operate in machined slots at sides of load platform. Each die mover is driven by compound wound direct current motor through Brad-Foote Gyro speed reducer and roller chains. Independent control of each die mover is effected by two pushbutton operated magnetic contactors. Buttons are located on dashboard.

Independent control of die movers makes accurate die spotting a simple matter. Die movers can be retracted into slots at rear of platform for skid handling. Additional control buttons can be located at rear of load platform if specified. Made by **Mercury Mfg. Co.**, 4038 S. Halsted St., Chicago 9, Ill.

SMALL IN SIZE

MIGHTY IN PERFORMANCE

FOR STAMPING, MARKING, PUNCHING, RIVETING, FORMING AND OTHER HIGH-SPEED OPERATIONS

Light, compact and powerful, the improved, post-war Benchmaster 4-Ton Capacity Punch Press offers performance formerly found only in far larger models. Its unusual and exclusive features include a cradle base that allows the press to be inclined; a precision-ground shaft keyed by a press fit to a large eccentric to provide shock-absorbing bearing surface, bronze bushings at all wear points, a single trip action that may be made to repeat rapidly by removing a screw located in the collar, automatic knockout, an open back so that work may also be inserted from the front, a new-type floating motor mount which maintains proper tension of the V-belt, standardization of parts for quick, easy interchangeability and many other typical Benchmaster improvements.

For full information about this new Benchmaster Punch Press and other quality Benchmaster machine tools, write to Dept. NED.2

Announcing The New 1947 Transporter with ATCO ELECTRIC LIFT

The new 1947 TRANSPORTER has an electric-lift motor and pump which uses less current than reserve left in famous TRANSPORTER 11-plate battery at end of a full day's hauling. Yet it recharges from a light socket.

Simple pressure of forefinger on new ATCO ELECTRIC LIFT BUTTON raises load to moving height in SECONDS! Less than 10% of battery capacity is used to lift average load. All controls are operated from buttons and guiding handle.

In 4000 to 6000 pound capacity platform model and 4000 pound capacity pallet model. Also comes with ATCO FOOT LIFT at lower cost. Write for facts.

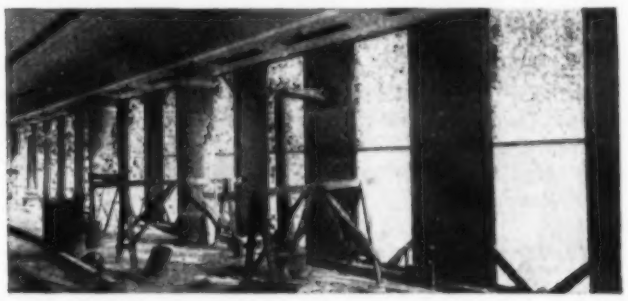
NEW Processes AND Materials

PLASTIC GLAZING MATERIAL

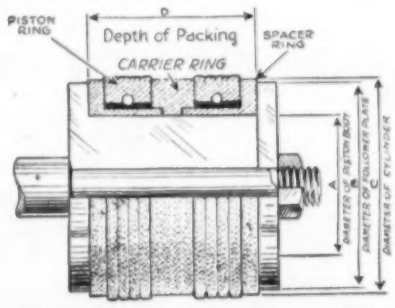
Transparent, shatterproof, flexible Richglaze plastic glazing material admits more than 60 per cent of sun's ultraviolet rays. Material is recommended for use wherever it is desirable to admit light and rays of sun and yet provide weather barrier. It can be used to close in buildings under construction, to serve as winter closure for outside scaffolding, as safety glazing under glass skylights to stop falling glass and as heat and dust barriers in greenhouses, warehouses and factories. It is installed by cutting sheets to size with scissors and nailing on frames. Thirty-six-inch width rolls can be furnished in 150 and 450-square foot sizes. Made by Richkraft Co., 165 W. Wacker Dr., Chicago, Ill.



▲ Mention Item NED-1139 when writing ▲

PISTON PACKING

Adaptable to reciprocating pumps and other equipment with cylinder diameters ranging from 3 to 20 inches, and using ½-inch packing or larger, Piston-Pak packing is an assembled unit composed of central carrier ring and spacer rings that form grooves for free working piston rings. Packing operates with minimum friction and eliminates swelling, binding, grooving and wire drawing. It is made of self-lubricating Bakelite material and is built to fit over piston. Material is recommended for equipment handling hot or cold water, oils, distillates, gasoline, carbon dioxide, naphtha, kerosene, brine, beer, mild acids and solvents. It will withstand temperatures of up to 280 F and pressures ranging to 500 pounds per square inch.



Units are easily installed and are held securely in place by follower plate. For best results, cylinder should be true and smooth. Made by A. T. Doyle Co., 6112 Page Blvd., St. Louis 14, Mo.

New Processes & Materials

ELECTRICAL TOOL INSULATION

Tools used in electrical and high tension work are insulated durably and reliably by means of Cohardite which is made by combining properties of Geon polyvinyl plastic and Hycar oil resistant American made rubber. These latter two materials are products of B. F. Goodrich Chemical Co. In addition to insulation properties, handles insulated with Cohardite have excellent impact, oil and grease resistance. Linemen's pliers shown at top have been tested to 28,000 peak volts. Insulation made by Connecticut Hard Rubber Co., New Haven, Conn.

▲ Mention Item NED-1149 when writing ▲

NICKEL & MONEL CLAD STRIP

Nickel and Monel clad strip combines corrosion resistance and strength of nickel or Monel with the properties of steel. Strip is available in widths ranging from 0.25 to 10.25 inches in coils up to several hundred feet in length depending upon gage. Cladding can be furnished on both or on only one side depending on requirements. Standard cladding thickness is 1 per cent of total thickness. In cold rolled condition, strip is produced in thicknesses between 0.010 and 0.125-inch. In hot rolled condition it is available in thicknesses between 0.095 and 0.25-inch.

Separation of nickel or Monel cladding from steel base cannot be effected by mechanical means or heating. Because of this, strip can be stamped, drawn, spun, bent, spot welded or otherwise fabricated in same manner as ordinary low carbon deep drawing steel. Cost of strip is approximately 30 to 3 per cent less than that of solid nickel or Monel. Made by Superior Steel Corp., Carnegie, Pa.

New Processes & Materials

FLEXIBLE GAS TUBING

Available in ¼, ⅜, ½, ⅝, ¾, 1 and 1¼-inch sizes, Carbo-Flex flexible gas tubing can be used to connect testing apparatus, portable heaters, floor furnaces, refrigerators, stoves and other natural or manufactured gas fired equipment. Tubing is furnished in standard lengths of from 1 to 6 feet and in other lengths for special applications. Wiggins Quick Couplings are located at both or at either end, as desired, and pull-push operation effects tight, leakproof seal.

Tubing has heat and acid resistant neoprene lining. Outside can be furnished in stainless steel, Monel, bronze, brass, copper, aluminum or other metals. Self-sealing valve provides positive leakproof safety while coupling is disconnected. Made by **Carbo-Flex Hose Co.**, 5452 Vineland Ave., North Hollywood, Calif.

CORROSION PREVENTIVES

Series of nine Cosmoline corrosion preventives is available to meet all manufacturing, shipping and storage problems. Four of the preventives are of removable thin film solvent type, one is nonremovable dielectric variety and remaining four are oil type films varying in viscosity from thin oil film to medium grease consistency. Line is said to give complete protection for temporary intraplant movement of articles as well as for shed and outdoor exposures. Made by **E. F. Houghton & Co.**, 303 W. Lehigh Ave., Philadelphia 33, Pa.

▲ Mention Item NED-1160 when writing ▲

VALLEY DRILLS

AUTOMATIC—PNEUMATIC

—Patent Applied For—

With standard Pneumatic Rotary Drill Motors mounted in a two-way air cylinder.

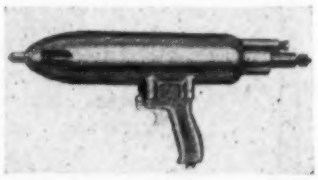
If you are interested in reducing the cost of drilling and reaming up to ½" as well as eliminating your capital investment on a machine to do this work, then screw our Automatic Pneumatic Drills with hydraulic feed control with adjustable stop for accurate depths right onto your jig with adaptor drill bushing.

These units are supported entirely by the adaptor drill bushing and will operate at any angle or plane—simultaneously or intermittent. The only control necessary is a standard four-way air valve.

This method eliminates expensive heavy machines and troublesome electrical control panels. Air cushioned feed reduces drill breakage and the motor will not burn up if the drill is stalled.

These drill units can be transferred from one jig to another and use a different size drill within its capacity in a few minutes using the same air control valve and the same air hose connections.

Above: Model "S" Stationary Installation



Above: Model "P"—Portable Hand Drill For portable hand drilling in jigs having large quantities of holes of the same size. No physical effort required since the drill unit locks in the drill jig lock liner bushing by a hex-bayonet lock drill bushing which screws into the nose of the drill.

Send in your part print for our recommendations —OR write for catalog—

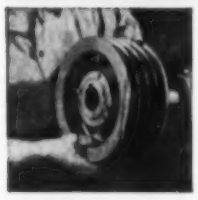
Quick And Easy On-Off Action

"MAGIC-GRIP" SHEAVES

Save You Both Time and Money

1. To put on: place sheave on shaft, slide to spot desired, line up exactly with corresponding driver or driven sheave, tighten three cap-screws. Grips like magic; assures smooth performance.

2. To take off: remove the three cap-screws, use two of them as jack-screws to separate bushing from sheave. Released, tapered bushing regains natural expansion, automatically breaking tight grip of bushing.



3. On or off, "Magic-Grip" sheaves slide easily without hammering or forcing. They cut "down time," reduce maintenance costs. Your nearest Allis-Chalmers office or dealer has details, or write for Bulletin 20B6310.

New Processes & Materials

PRECISION ALLOY CASTINGS

Produced in any castable alloy, small precision castings can be supplied to tolerances as close as 0.002-inch or less. Both centrifugal and vacuum methods of casting are employed, latter providing maximum accuracy. Parts have satin-smooth finish so that frequently they can be used without further machining. Castings can be supplied to suit customer's specifications. Where desired, samples or production runs can be checked for surface imperfections by Zyglo ultraviolet light process and for internal defects by x-ray examination. Service offered by **Aro-Cast Corp.** and **Precise Castings Corp., Hillside,** N. J.

▲ Mention Item NED-1167 when writing ▲

BAKED ENAMEL FINISH

Capable of withstanding temperatures of more than 500 F without yellowing, Polytherm heat resisting baking enamels are made in white, black and colors. Though different in formation and structure, this enamel is as easy to apply as other types. It sprays at extremely high solids content and bakes to hard, smooth, lustrous finish with excellent hiding qualities, high gloss and freedom from orange peel. It has good color retention, is unaffected by hot fats and greases, and is immune to most chemicals including alkalies. Developed by **Interchemical Corp.,** Finishes Div., 350 Fifth Ave., New York 1, N. Y.

▲ Mention Item NED-1168 when writing ▲

CASTING PLASTIC

Possessing wide range of adaptability, Castolite transparent liquid plastic has consistency of syrup before being cast and hardened. Unusual feature is that material requires no pressure and not much heat to set. Plastic can be hardened in conventional kitchen oven.

In scientific fields, material can be used to preserve permanently, in original color and form, different specimens of insect and plant life. Any hue or color can be given plastic by adding dye to liquid before being cast. Other common and recommended uses for material include objects such as bookends, pen holders, picture frames and costume jewelry. Introductory kits are available from manufacturer. Made by **Castolite Co.,** Box 211, Dept. R-22, Kenilworth, Ill.

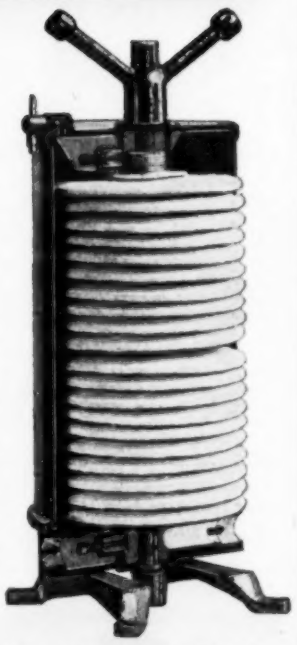
"Disc-Pak" FILTER FOR OILS

Removes particles down to the Millionth of an Inch



The Alsop New "*Disc-Pak*" Filtration Principle completely removes dirt, rust, moisture, sludge, metallic particles and all other impurities from Turbine, Fuel, Diesel, Transformer, Hydraulic Oils, Water, etc.

The Filter "*Disc-Paks*" are made in eight different densities, making available practically any degree of fineness of filtration you may desire. Our finer discs will remove particles down to the millionth part of any inch. Write for your copy of Bulletin No. 144 today.

NEW Literature AND Catalogs

SYNTHETIC RUBBER PRODUCTS—Illustrated booklet presents results of laboratories' evaluation of compounds made from synthetic rubber of all types when they have been exposed to various oils, fuels and solvents—shows molded items, extruded shapes, lathe-cut washers and sheet and roll goods—issued by Acadia Synthetic Products Div., Western Felt Works, 4117 Ogden Ave., Chicago, Ill.

▲ Mention Item NED-1177 when writing ▲

INSTRUMENTS, TOOLS & EQUIPMENT—96-page illustrated 1947 tool catalog presents engineering and application information on laboratory instruments, machine tools, machinists' tools, measuring instruments, optical equipment, toolroom specialties, transmission equipment and gears, couplings, chains, speed reducers, variable speed drives, V-belts and sheaves—issued by George Scherr Co., Dept. NED, 200 Lafayette St., New York 12, N. Y.

▲ Mention Item NED-1178 when writing ▲

DUST COLLECTORS—16-page illustrated technical bulletin No. 101 presents details of rotor, pump and orifice types Hydro-Whirl wet dust collectors applicable in buffing, grinding and trimming operations, molding and foundry work and other industrial operations—collectors can be furnished for small applications or in large battery type units for central systems—available upon letterhead request—issued by Peters-Dalton, Inc., 17900 Ryan Rd., Detroit 12, Mich.

▲ Mention Item NED-1179 when writing ▲

HACK SAW BLADES & BAND SAWS—16-page illustrated G. W. Griffin Co. price list covers high speed steel power machine blade of 18-4-1 tungsten steel for cutting hardest alloys, special alloy molybdenum high speed steel blade for fast economical production metal sawing, New Griffin hand saw blade, and Non-Strip hand saw blade—data are given also on band saw machine operation—issued by John H. Graham & Co., 105 Duane St., New York 8, N. Y.

▲ Mention Item NED-1180 when writing ▲

ELECTRICAL CODE DATA—408-page book "National Fire Codes, Vol. V, National Electrical Code" 1947 edition is collection of rules governing installation and use of electrical equipment to reduce hazard of electrical fires and accidents—contains examples, index of publications relating to sections of code, and section of approved products—price is $2—published by National Fire Protection Association, 60 Batterymarch St., Boston 10, Mass.

▲ Mention Item NED-1181 when writing ▲

HEATING SYSTEM—8-page illustrated bulletin No. 2083 describes Electro-Vapor heating system for chemical process vessels which combines advantages of electricity and Dowtherm heating—provides accurately controlled uniform heating at low electrical energy cost—issued by Blaw-Knox Div., Blaw-Knox Co., P. O. Box 1198, Pittsburgh, Pa.

▲ Mention Item NED-1182 when writing ▲

PORTABLE CONVEYORS

- *In standard mobile units*
- *Easily rolled from place to place*
- *Quickly coupled together*

When plant operations require changes in conveyor equipment, it's no trick at all with Buschman Portable Conveyors! There is no need to move stands. One stand supports two sections equally. For passage through the line, just pick a section out of the line—easily and quickly. Put it right back—without fuss or trouble. Convenient straight and curved mobile sections are quickly, firmly joined with Buschman "Quick-Eez" couplings. Both Roller and Wheel types have full ball bearings . . . are mounted on swivel castors . . . stands provide adjustable heights. Low in price! Write for detailed Bulletin 10.

YOUR EMPLOYEES WILL APPRECIATE *Bradleys*, TOO

- Plenty of Clean Running Water
- No Delays—No Waiting
- Save Space
- Reduce Water Consumption
- One Sprayhead replaces many faucets
- Less Janitor Work

America's accepted group washing fixture has invariably proved an employee goodwill builder wherever installed. Employees enjoy the many conveniences made possible with a Bradley Washfountain and heartily approve of the health protection such an installation assures.

One Bradley does the work of 8 to 10 "single person" wash basins thereby eliminating many piping connections, reducing plumbing fixtures and saving space. Industrial records also reveal a 70% drop in water consumption, a definite reduction in hot water costs besides a valuable aid in promoting cleanliness and health . . . . . BRADLEY WASHFOUNTAIN CO., 2253 West Michigan Street, Milwaukee 1, Wisconsin.

SELF-BALANCING POTENTIOMETER

CONVERTS SMALL D-C VOLTAGES TO MEASURABLE CURRENTS

Here's a new electronic device that extends the range of conventional indicating and recording instruments so that they can be used for high-sensitivity measurement of low d-c voltages and direct currents. It provides an economical means for making measurements that, heretofore, required complicated and costly equipment. Other applications are: telemetering, temperature measurement, analysis of electronic circuits, and to initiate control when used with sensitive relays.

LOW CURRENT DRAIN—Puts no load on the measured circuit.
FULLY AUTOMATIC—Requires no manipulation to obtain balance.
ADJUSTABLE RANGES—Easily changed resistor permits selection of input ranges from 100 microvolts to one volt d-c full scale with five-milliampere output.
RAPID RESPONSE—Circuit balances automatically in approximately one second on 200-microvolt range, faster on higher ranges.
WIDE-RANGE OUTPUT—Permits use of indicating or recording instruments having resistance up to 1500 ohms.

Complete details are listed in Bulletin GEA-4625. Call the nearest General Electric office for your copy or write to *Apparatus Dept., General Electric Co., Schenectady 5, N. Y.* **PRICE $200**

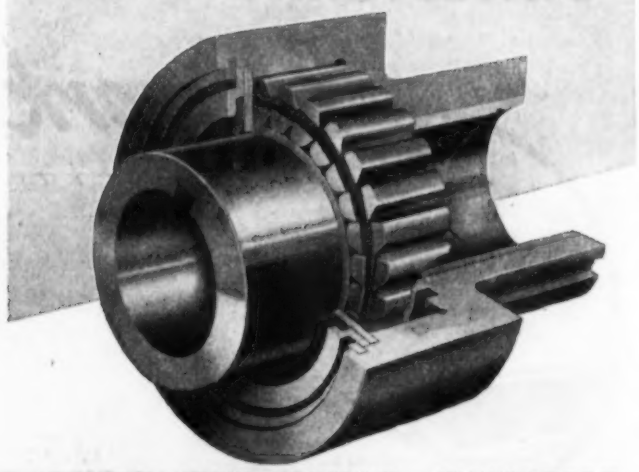
Do You Need a REALLY GOOD



OVER-RUNNING CLUTCH?

If you have, or may have, an application, let us give you full information about

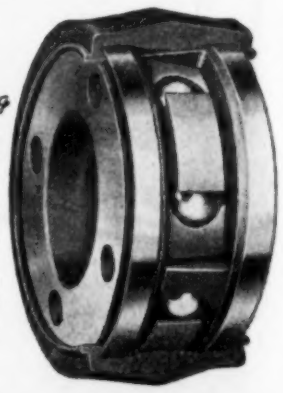
FORMSPRAG
THE FULL COMPLEMENT
Over-Running Clutch

You realize, as do we, that there are many applications where ordinary clutches serve the purpose.

But there are hundreds of applications where you need something better! You may need extremely high torque capacity in limited space. You may need a clutch that cuts in and out hundreds of times a minute. You may require such extreme accuracy in your production that only Formsprag will do the job properly.

If you have a tough application — one that requires that "extra something" — it is well worth while to investigate Formsprag.

BALLFLEX
ANGULAR AND AXIAL
Anti-Friction Flexible Coupling



Ballflex, quickly installed between keyed flanges, accommodates parallel misalignment up to ⅛" and/or angularity up to 3°. It is packed with lubricant for the life of the unit. Flexibility is by mechanical means only. All torque is delivered by hardened steel balls. Free rolling movement in any direction eliminates side thrust and insures long life for both coupler and bearings

You Can Produce Only As Much As You Can Handle

When you use C-F Sheet Lifters to load, carry and unload loose or bundled sheets in and out of storage, you keep no machine or operator idle, waiting for material.

C-F Lifters provide a faster, safer and more economical method of handling sheet stock because they carry more sheets per load, have a tong action that grips loads tightly, preventing stock slippage or sag, yet design features such as wide bearing surfaces give full protection to stock edges. One man and or remote cab control keeps operator away from sides—stock can be loaded or unloaded in close quarters with resulting savings in storage room.

Jaw controlling mechanism provides infinite adjustments from minimum to maximum widths. Control is fast, positive. C-F Lifters have standard and optional equipment that will exactly meet any materials handling requirement you may have. Lifters are available in capacities from 2 to 60 tons or larger, in standard or semi-special designs. Write for new Sheet Lifter Bulletin—just off the press. CULLEN-FRIESTEDT CO., 1304 S. Kilbourn Ave., Chicago 23, Ill.

6 or 8 SPINDLES!

MULTI-DRILL

DRILL 6 or 8 HOLES AT ONE STROKE IN ANY PATTERN WITH MULTI-DRILL

Fits ANY Drill Press

The new 8-Spindle unit in the MULTI-DRILL line brings your single spindle tools even greater production capacity and wider operating range. Now you can drill 8 holes at one stroke in *any* hole pattern on or within 9" circles—½" center distance, . . . drill sizes 1-32" to 3-8". All the features which made MULTI-DRILLS preferred tools are built in . . . fast, easy positioning of locating arms . . . heavy duty, long-life universal joints . . . "oilite" lifetime bearings . . . precision collet spindle assemblies and rugged construction which assures long trouble-free service. The 6-Spindle MULTI-DRILL handles any hole pattern on or within 5" circles—½" min. centers.

CLECO GRINDERS ARE Packed with Power!

● In addition to their remarkable power, Cleco Rotary Grinders operate *vibration-free at all times*—due to the perfect balance of the alloy steel rotors which are heat treated and ground to exact size. Air is admitted under *each* blade throughout its power sector—insuring immediate starting even under load. The governor is set so that at 80-lb. gauge pressure it holds the grinder safely at its most effective speed. The tool automatically shuts off if governor should break—an important safety feature.

Cleco Grinders are available in many sizes and speeds for every wheel size and grinding condition. *Write for Bulletin 80 on Cleco Grinders.*

No. 860 Models illustrated—all series available with these straight or spade handles.

Save 3 ways with... KRW ARBOR PRESSES

1 You name the job, and we'll name the KRW Press best fitted to do it better, faster, and at lower cost. Take KRW Hand-operated presses for example: they give more power with less effort... combining faster ram travel with a quick-acting finger controlled valve that makes the KRW Press outstanding in efficient hydraulic action. Twin pumps enable operator to vary ram speed. The special "Capstan" type handwheel brings the ram to the work fast as well as providing a "built-in" mechanical press for the lighter jobs. 30 days delivery guaranteed. Write for prices and catalog.

2 KRW Hydraulic Presses equipped with our "Speedi-Booster" operate on compressed air, providing tons of pressure at the ram by effortlessly raising or lowering the operating lever. In operation, compressed air enters an air cylinder, the piston of which drives the smaller hydraulic oil piston which, in turn, forces the oil under pressure to the large cylinder piston. Tonnage pressures are dependent upon initial air pressure and size of air and oil cylinders. 30 days delivery.

3 Here is a self-contained power unit that drives KRW Hydraulic Presses. These units can be purchased separately to drive any existing KRW Press. The KRW Motor Driven Hydraulic Presses are low-cost, production units ideally suited for short runs or small work.
Presses are equipped with Seco Radial type pumps in capacities ranging from 3,000 to 10,000 PSI. Guaranteed by both the manufacturer and K. R. Wilson. Write for prices.

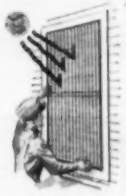
PLAN NOW FOR Cool Comfort NEXT SUMMER

KOOLSHADE* SUN SCREEN

BLOCKS SUN HEAT RAYS *Outside* THE WINDOW



KoolShade is the most efficient of all shading devices! Up to 90% of sun heat rays are blocked and radiated outside the window. Sun-exposed rooms stay as much as 15 degrees cooler, yet the vision is not cut off or blurred.

KoolShade cuts air conditioning costs, too, by reducing the load on present equipment, thus lowering electricity and maintenance costs. On new installations an excellent cooling job can be done with lighter, less expensive equipment if KoolShade is used on all sun-exposed windows.

NOTE THESE VALUABLE FEATURES

- *Permanently set at 17° angle for shading efficiency.*
- *Prevents fading of valuable drapes and furnishings.*
- *Easy and inexpensive to install—no rust, rot or rattle.*
- *Fits smoothly into modern architectural design.*
- *Durable bronze KoolShade is effective as insect screen.*

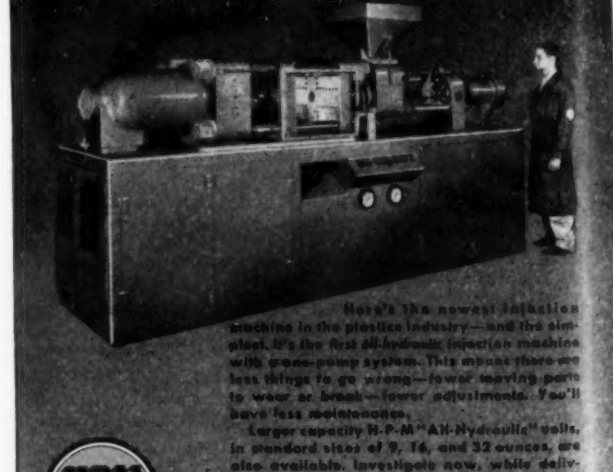
The New H-P-M All-Hydraulic 4-oz. Injection Molding Machine



Here's the newest injection machine in the plastics industry—and the simplest. It's the first all-hydraulic injection machine with crane-pump system. This means there are less things to go wrong—fewer moving parts to wear or break—fewer adjustments. You'll have less maintenance.

Larger capacity H-P-M "All-Hydraulic" units, in standard sizes of 9, 16, and 32 ounces, are also available. Investigate now, while deliveries are favorable. For complete details on the new 4 oz. machine, write for Bulletin 4701.

STOP COSTLY LEAKS!

SEAL PIPE JOINTS with KEY-TITE

Pipe joints once sealed with Key-Tite do not leak, yet they can be easily opened because Key-Tite does not freeze the connection. It contains no lead nor lead substitutes and does not affect the taste or odor of potable liquids. Key-Tite prevents leaks on all lines carrying water, gas, low-pressure steam, compressed air, etc.

Send for Free Sample — test Key-Tite in your own plant at no cost to you.

FACTS YOU SHOULD KNOW

"Unbrako" Socket Screws are exceedingly strong, very uniform and therefore dependable—and being made from the finest alloy material—they fill the exacting needs of engineers and mechanics.

"Unbrako" Socket Cap Screws have knurled slip-proof heads—so that they can be screwed in faster and farther, before a wrench is used.

"Unbrako" Socket Set Screws have knurled cup points which make them "self-lockers"—the points dig-in and refuse to budge, regardless of the most chattering vibration.

"Unbrako" Socket Screws have proven so superior that they are being adopted more and more by industry as a whole.

Write for a copy of the "Unbrako" catalog of Socket Screw Products.

KEY KIT

You can't screw socket screws in or out, without a hex socket wrench,—so why not get our No. 25 or No. 50 "Hallowell" Hollow Handle Key Kit which contains most all hex bits.

Knurling of Socket Screws originated with "Unbrako" in 1934.

Good doctors, good nurses, and well-stocked first aid kits are wonderful things to have wherever occupational injuries may occur. But they cannot bring back a lost life or help to pay the ever increasing compensation costs to relatives or injured employees.

A couple of pounds of *prevention* in the form of a Strauss Safety Belt, in many cases would have been worth thousands of dollars worth of cure.

Strauss Safety Belts are designed for positive safety—each belt having a "known strength." For over fifteen years, they have been doing an unexcelled job of furnishing perfect protection wherever they're used.

Give Strauss Safety Belts a chance to help reduce compensation payments in your factory. *A Strauss Safety Belt Has Never Been Known To Fail.*

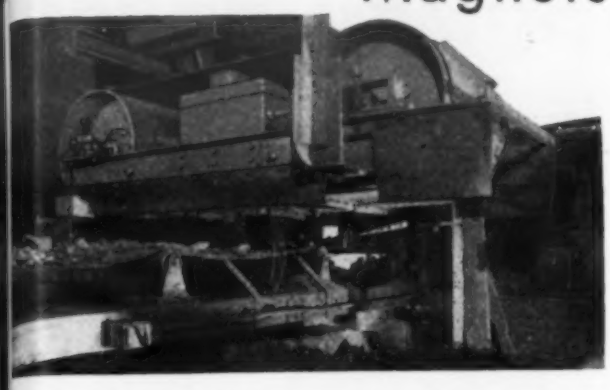
DINGS Self-Cleaning Magnets



for Large Volume Iron Removal

Remove large volumes of iron from heavily-loaded conveyor belts *automatically* with the new Dings Self-Cleaning Suspended Rectangular Magnet. Powerful magnetic field covers entire belt width, and reaches through deep belt loads to provide positive iron separation. Self-cleaning cross belt takes iron away from magnet face as it collects. Ask Dings for details today.

FOOT-CONTROL Speeds DEFECT-CUTTING in Veneer Plant

Cutting out surface defects in veneer panels is simplified and accelerated by the use of NOPAK equipment at Pacific Veneer Co., New Westminster, B.C. Here a NOPAK Model E Air Cylinder actuates vertical movement of the veneer cutter. The cylinder is controlled by a NOPAK Model R Foot Valve, leaving the operator's hands free to position the panels quickly and accurately . . . greatly increasing cutting capacity. The other foot valve shown is a NOPAK Model RN, with neutral holding position, which controls a cylinder on an adjacent machine.

GALLAND-HENNING MFG. CO., 2755 S. 31st St., Milwaukee 7, Wis.

Production Men: this application may suggest how operating cycles of certain machines in your shop can be speeded up.

The ONLY Successful OIL and GREASE RESISTANT MATTING
Neo-Cord Counter-Tred
Contains no rubber
Made with Dupont Neoprene

Tuf-Tred Superior Grade Tire Fabric Matting

A long-wearing mat for promoting safety and providing comfort. Beveled nosing on all sides. For use around machinery, on ramps, wet floors and in shower and locker rooms. ⅝" thick, up to 6' wide, any length.

AMERICAN Counter-Tred MATTING

A tough, durable, long wearing rubber and cord matting with a resilient non-slip surface that affords safety in wet or slippery areas. Ridged bottom affords aeration and drainage. Easily handled for cleaning. Adheres perfectly to the floor. Keeps the feet dry. ⅝" thick, 24" wide, any length.

AMERIFLEX Flexible Hard Wood Link Matting

Links are held on galvanized steel springwire framework. Lies flat. Follows contour of the floor. Beveled edges. Can be rolled or folded.

"WALRUS HIDE" Roll-Rubber Matting

36" wide, ⅛" thick, approx. 30 yards long.
Write for prices and folder, "A Mat for Every Purpose", describing matting for promoting safety, providing comfort, reducing fatigue and furthering sanitation.

Safe Hands plus Easier Work

Neoprene
STANZOILS
With Amazing New Non-Slip Fingers

● There are no safer gloves than Stanzoils, made of Pioneer processed Du Pont neoprene — that resist damage from oils and acids and last 3 to 7 times longer than rubber. But the remarkable new non-slip finish, that actually holds wet oily objects as if they were dry, gives workers added confidence and speed. Avoid costly injury claims, help your employees work more easily and faster—write today for Stanzoil catalog showing complete styles, weights, sizes.

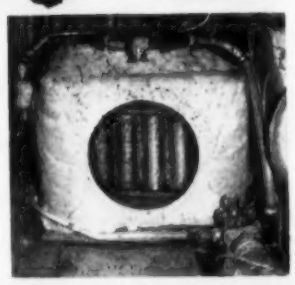
WOLVERINE TRUFIN gives

. . . as it keeps passengers comfortably cool in Douglas airplanes

The new Douglas DC-4s, as a result of successful tests, will be equipped with cooling units which will keep temperatures in cabin interiors down to a comfortable degree in hot weather. Wolverine Trufin forms an essential part of this recent development.

Trufin all one-piece, aluminum finned tube is ideal for aircraft use in heat exchangers. The heat transfer coefficient is high, thereby reducing the required surface area and ultimately saving volume and weight. Because the fins are integral with the tube itself, Trufin resists vibrations and retains its efficiency.

This illustrates another application of Wolverine Trufin, again demonstrating the high performance values this unique tube delivers in compact space.



The cooler unit is constructed of Wolverine Trufin (finned tubing) which contains a mixture of alcohol and carbon dioxide at a temperature of approximately 100° F below the freezing point of water. Air sucked into the plane by fan is routed through this cooler and keeps passengers comfortable during hot weather.

HYDROSEAL PRINCIPLE
Clear water follows path of arrows at a pressure higher than the pump discharge, entirely filling the annular clearance between impeller and pump side plates. Abrasive solution cannot enter this clearance, thus high efficiency is developed and maintained.

HYDROSEAL PUMPS
Capacities from 10 GPM to 7000 GPM. Belt Driven, Direct Connected Motor Driven and Overhead Motor Driven Types.

Abrasives Materials Pumped With 1/3 to 1/2 Less Power

Thousands of Hydroseal Pumps are now operating under what seems to be every conceivable pumping condition. Hydrosealing saves power, while Maximix Rubber Pumping Parts outlast equivalent metal parts, 4 to 6 times or more. This means economy under the most difficult conditions. Maximix Parts are easily replaced in the field, without vulcanizing. Send for Bulletin 140. ***The Allen-Sherman-Hoff Co., 1429 Locust St., Phila. 2, Pa. Representatives in Most Principal Cities.***

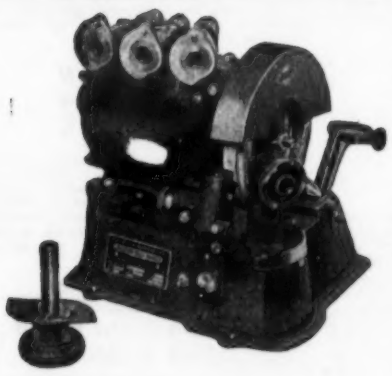
BLACK DIAMOND
PRECISION DRILL GRINDER



TOOLS BLACK DIAMOND GRINDERS

NO OTHER SMALL DRILL GRINDER CAN EQUAL THE EFFICIENCY OF A BLACK DIAMOND!

TO save time and skilled labor and keep all small wire and fractional drills always ahead of production demands is the job of a Black Diamond Drill Grinder.

There is no need to pay skilled labor for grinding small drills when any unskilled person can operate this machine at minimum wage and keep all drills properly ground with uniform lips, at the proper angle and with correct clearance for fast cutting.

Black Diamond grinding insures precision drilling, reduces drill breakage, saves expensive drill stock and cuts grinding time and expense to the bone.

Moderately priced, a Black Diamond Grinder will actually pay for itself in savings, in a few months, wherever small drills are used singly or in gangs. Write for new bulletin today.

A safety-tool that fits 15 different closures

Ampco's all-purpose bung wrench

One of a line of more than 500 safety tools recommended by casualty insurance and safety authorities for use amid explosive gases, fumes, and dust — this all-purpose bung wrench is a handy, safe tool for opening drums of gasoline or dozens of other inflammable materials. The diagram shows you how it is designed to fit 15 different closures.

Remember, Ampco offers the most complete line of safety tools on the market. Available in Ampco Metal, Ampco Beryllium-copper, and Monel Metal, they all have high strength and hardness, and exceptional resistance to corrosion. Write for latest safety-tool catalog. Ampco Metal, Inc., Dept. NE-2, Milwaukee 4, Wisconsin.
